Apart & Together

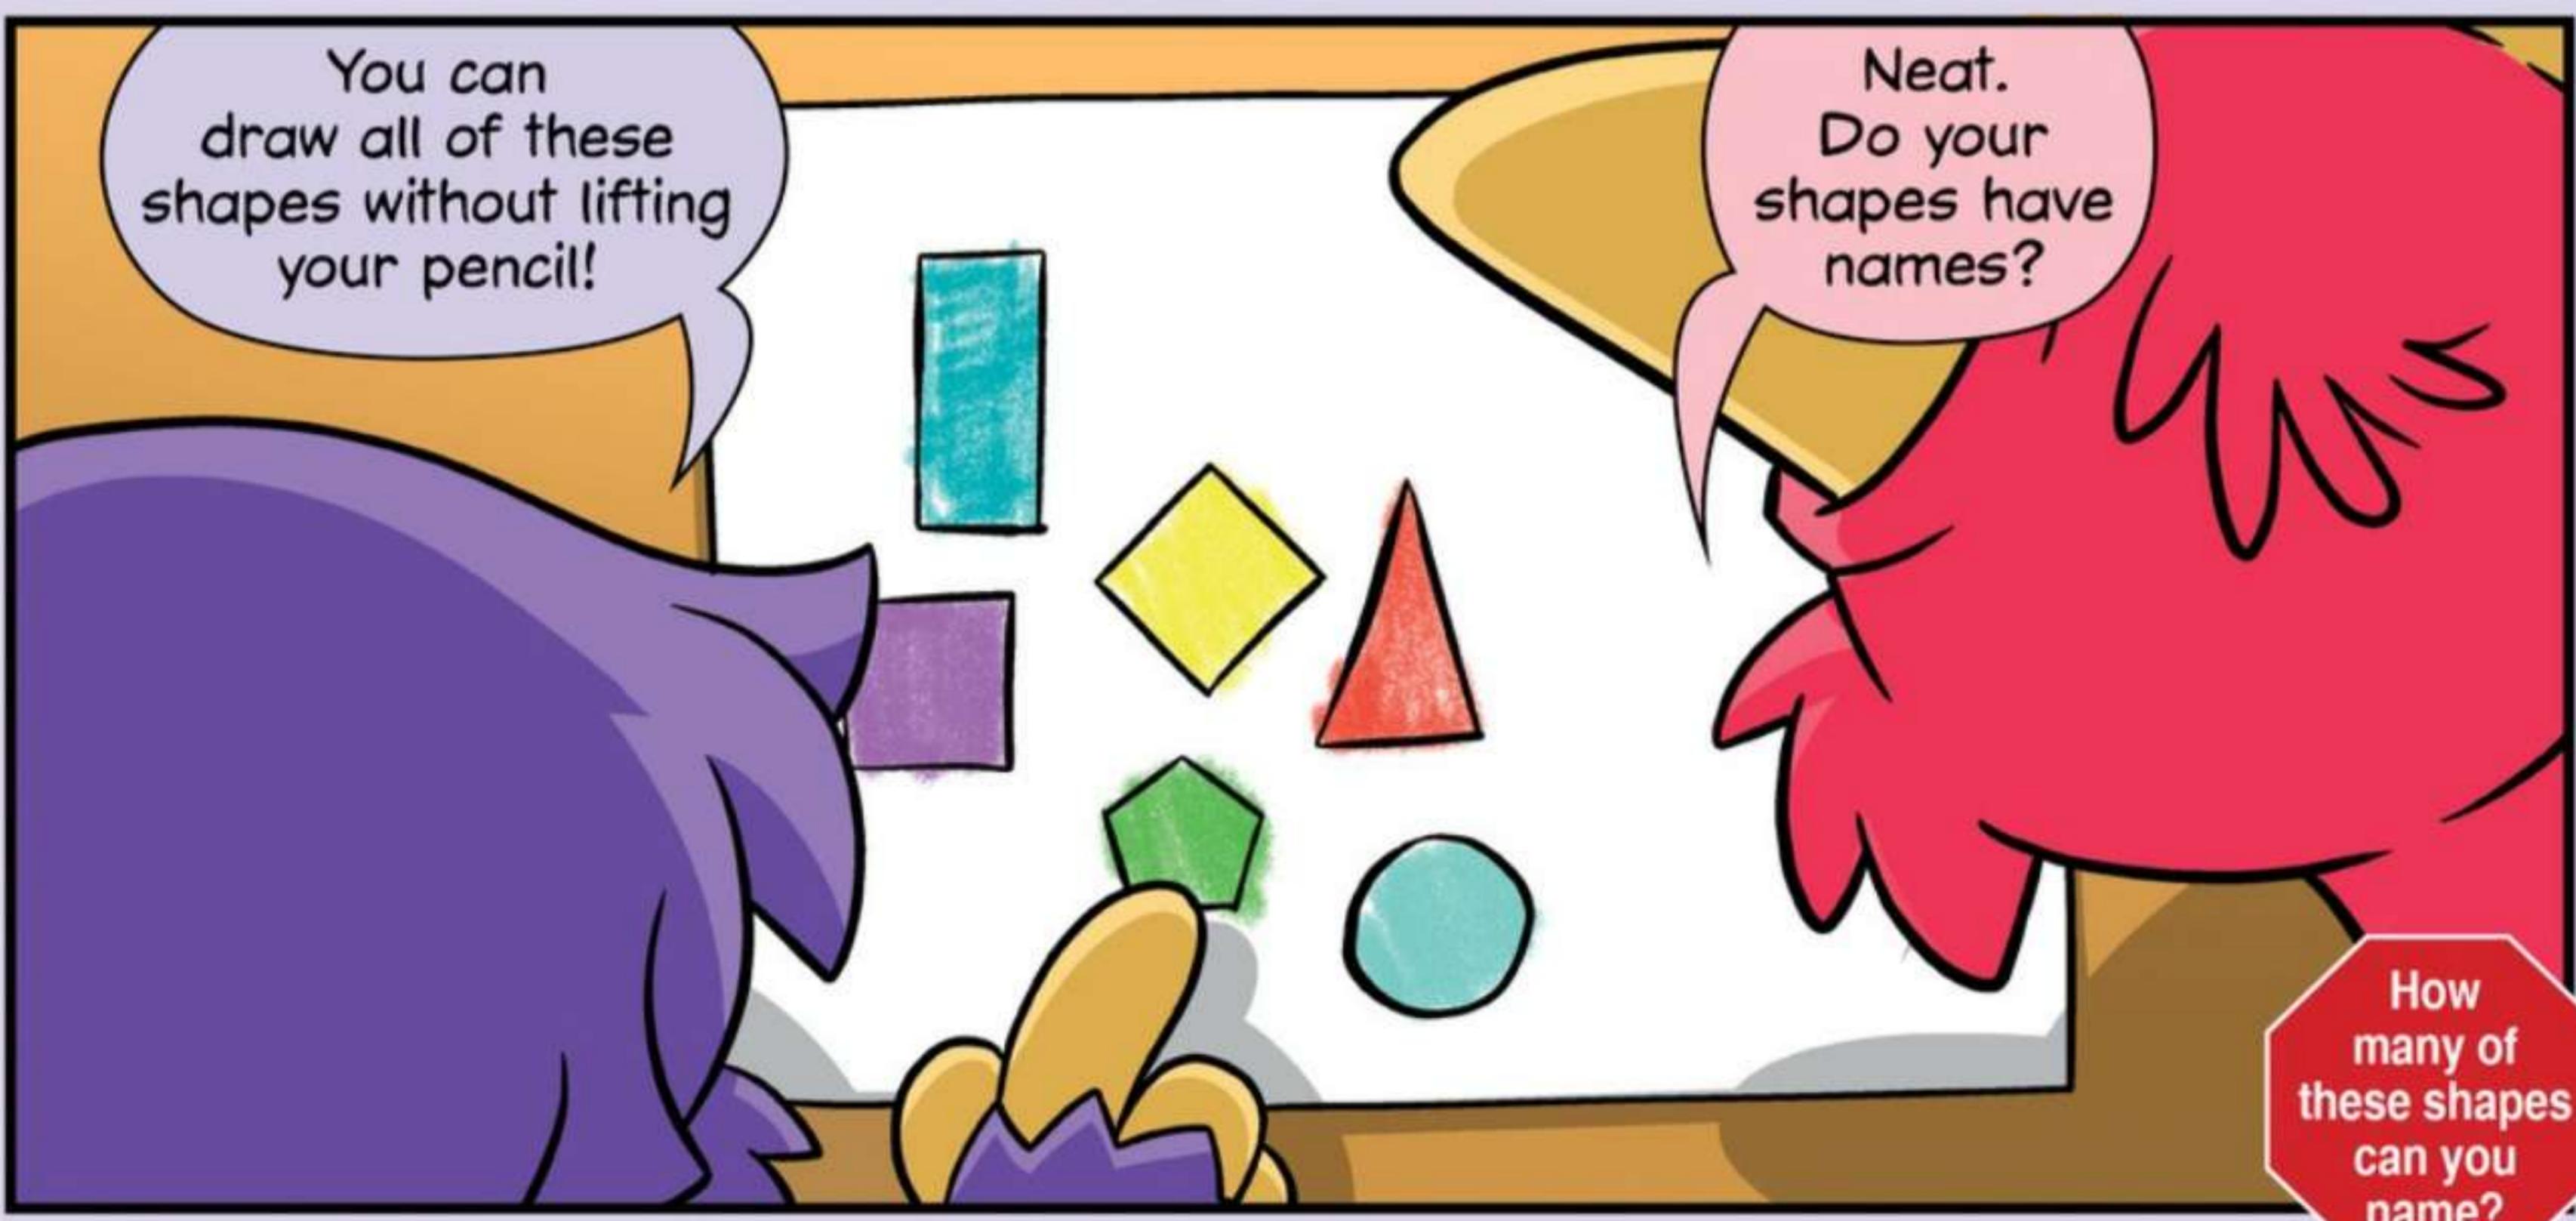

Can you split a square into 9 smaller squares that are all the same size?

106

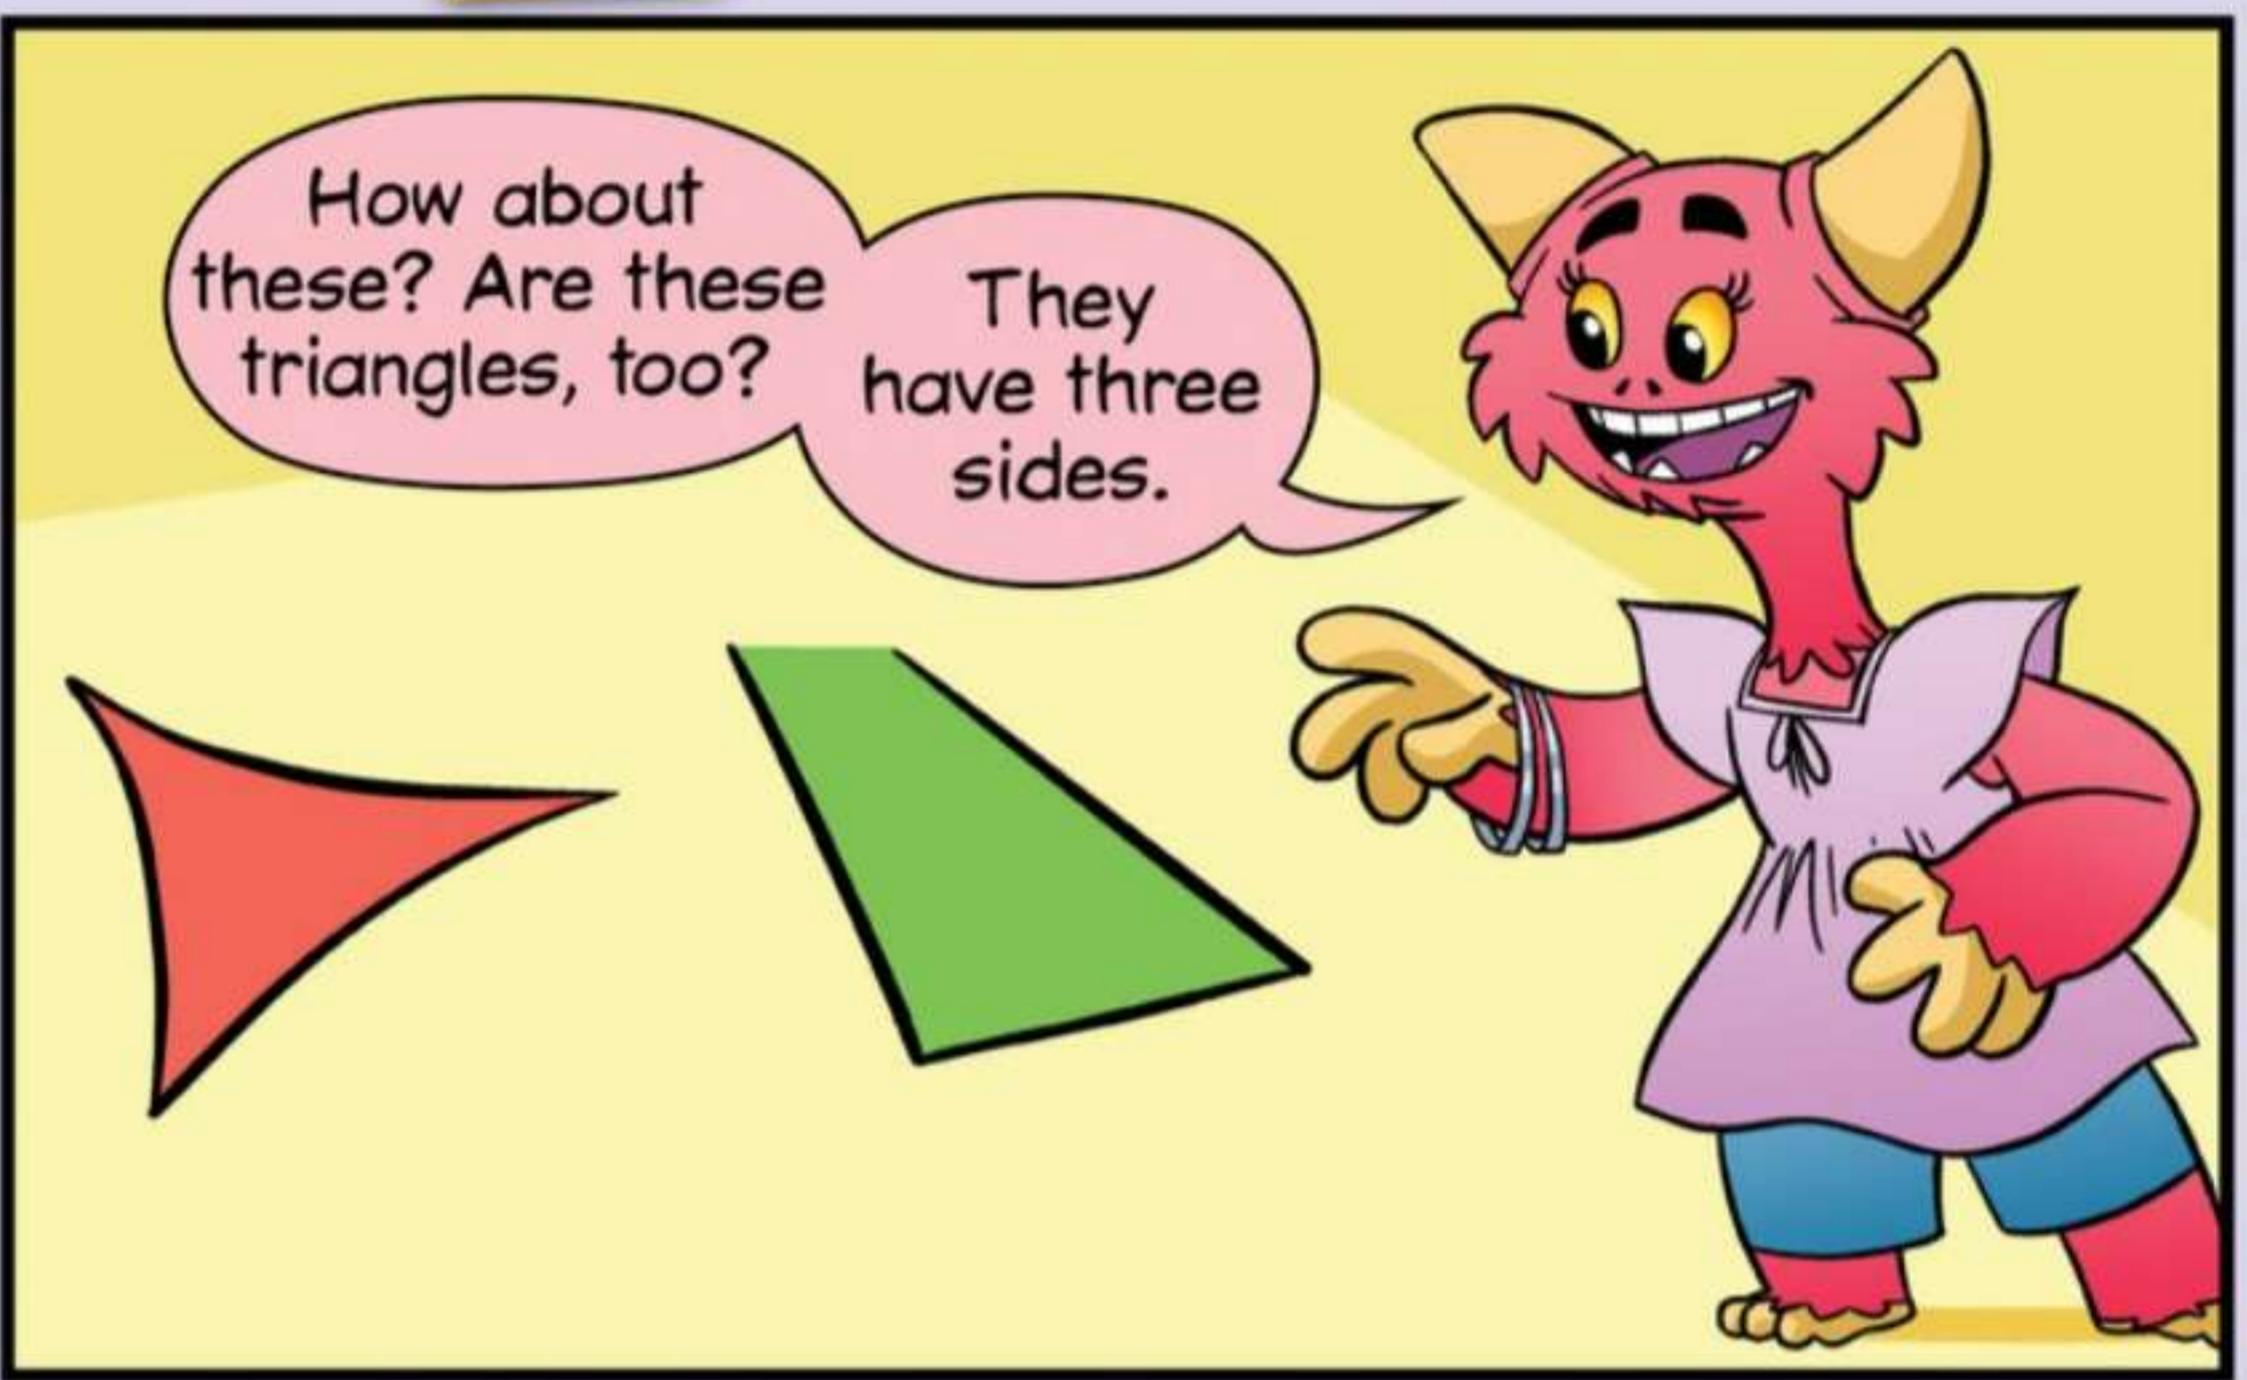

Chapter 2: Shapes

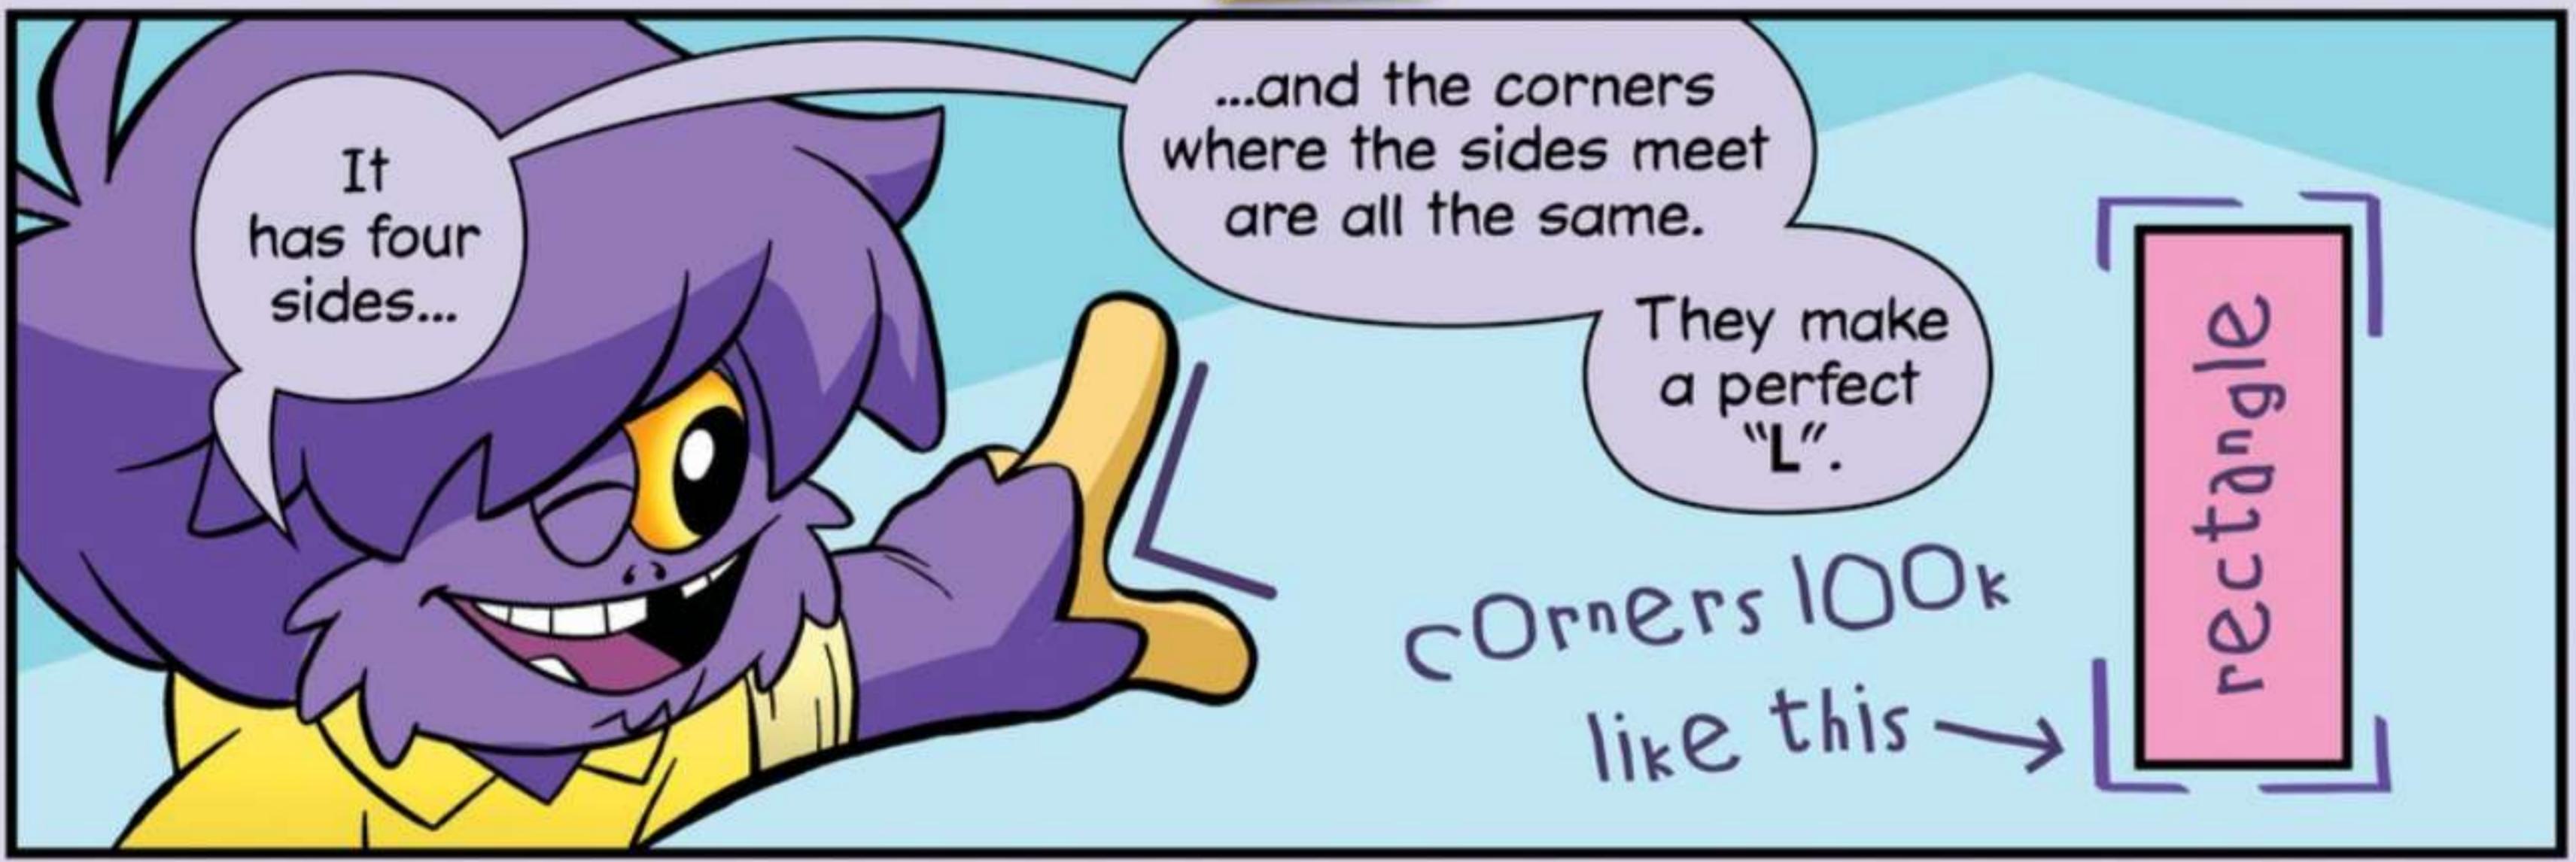

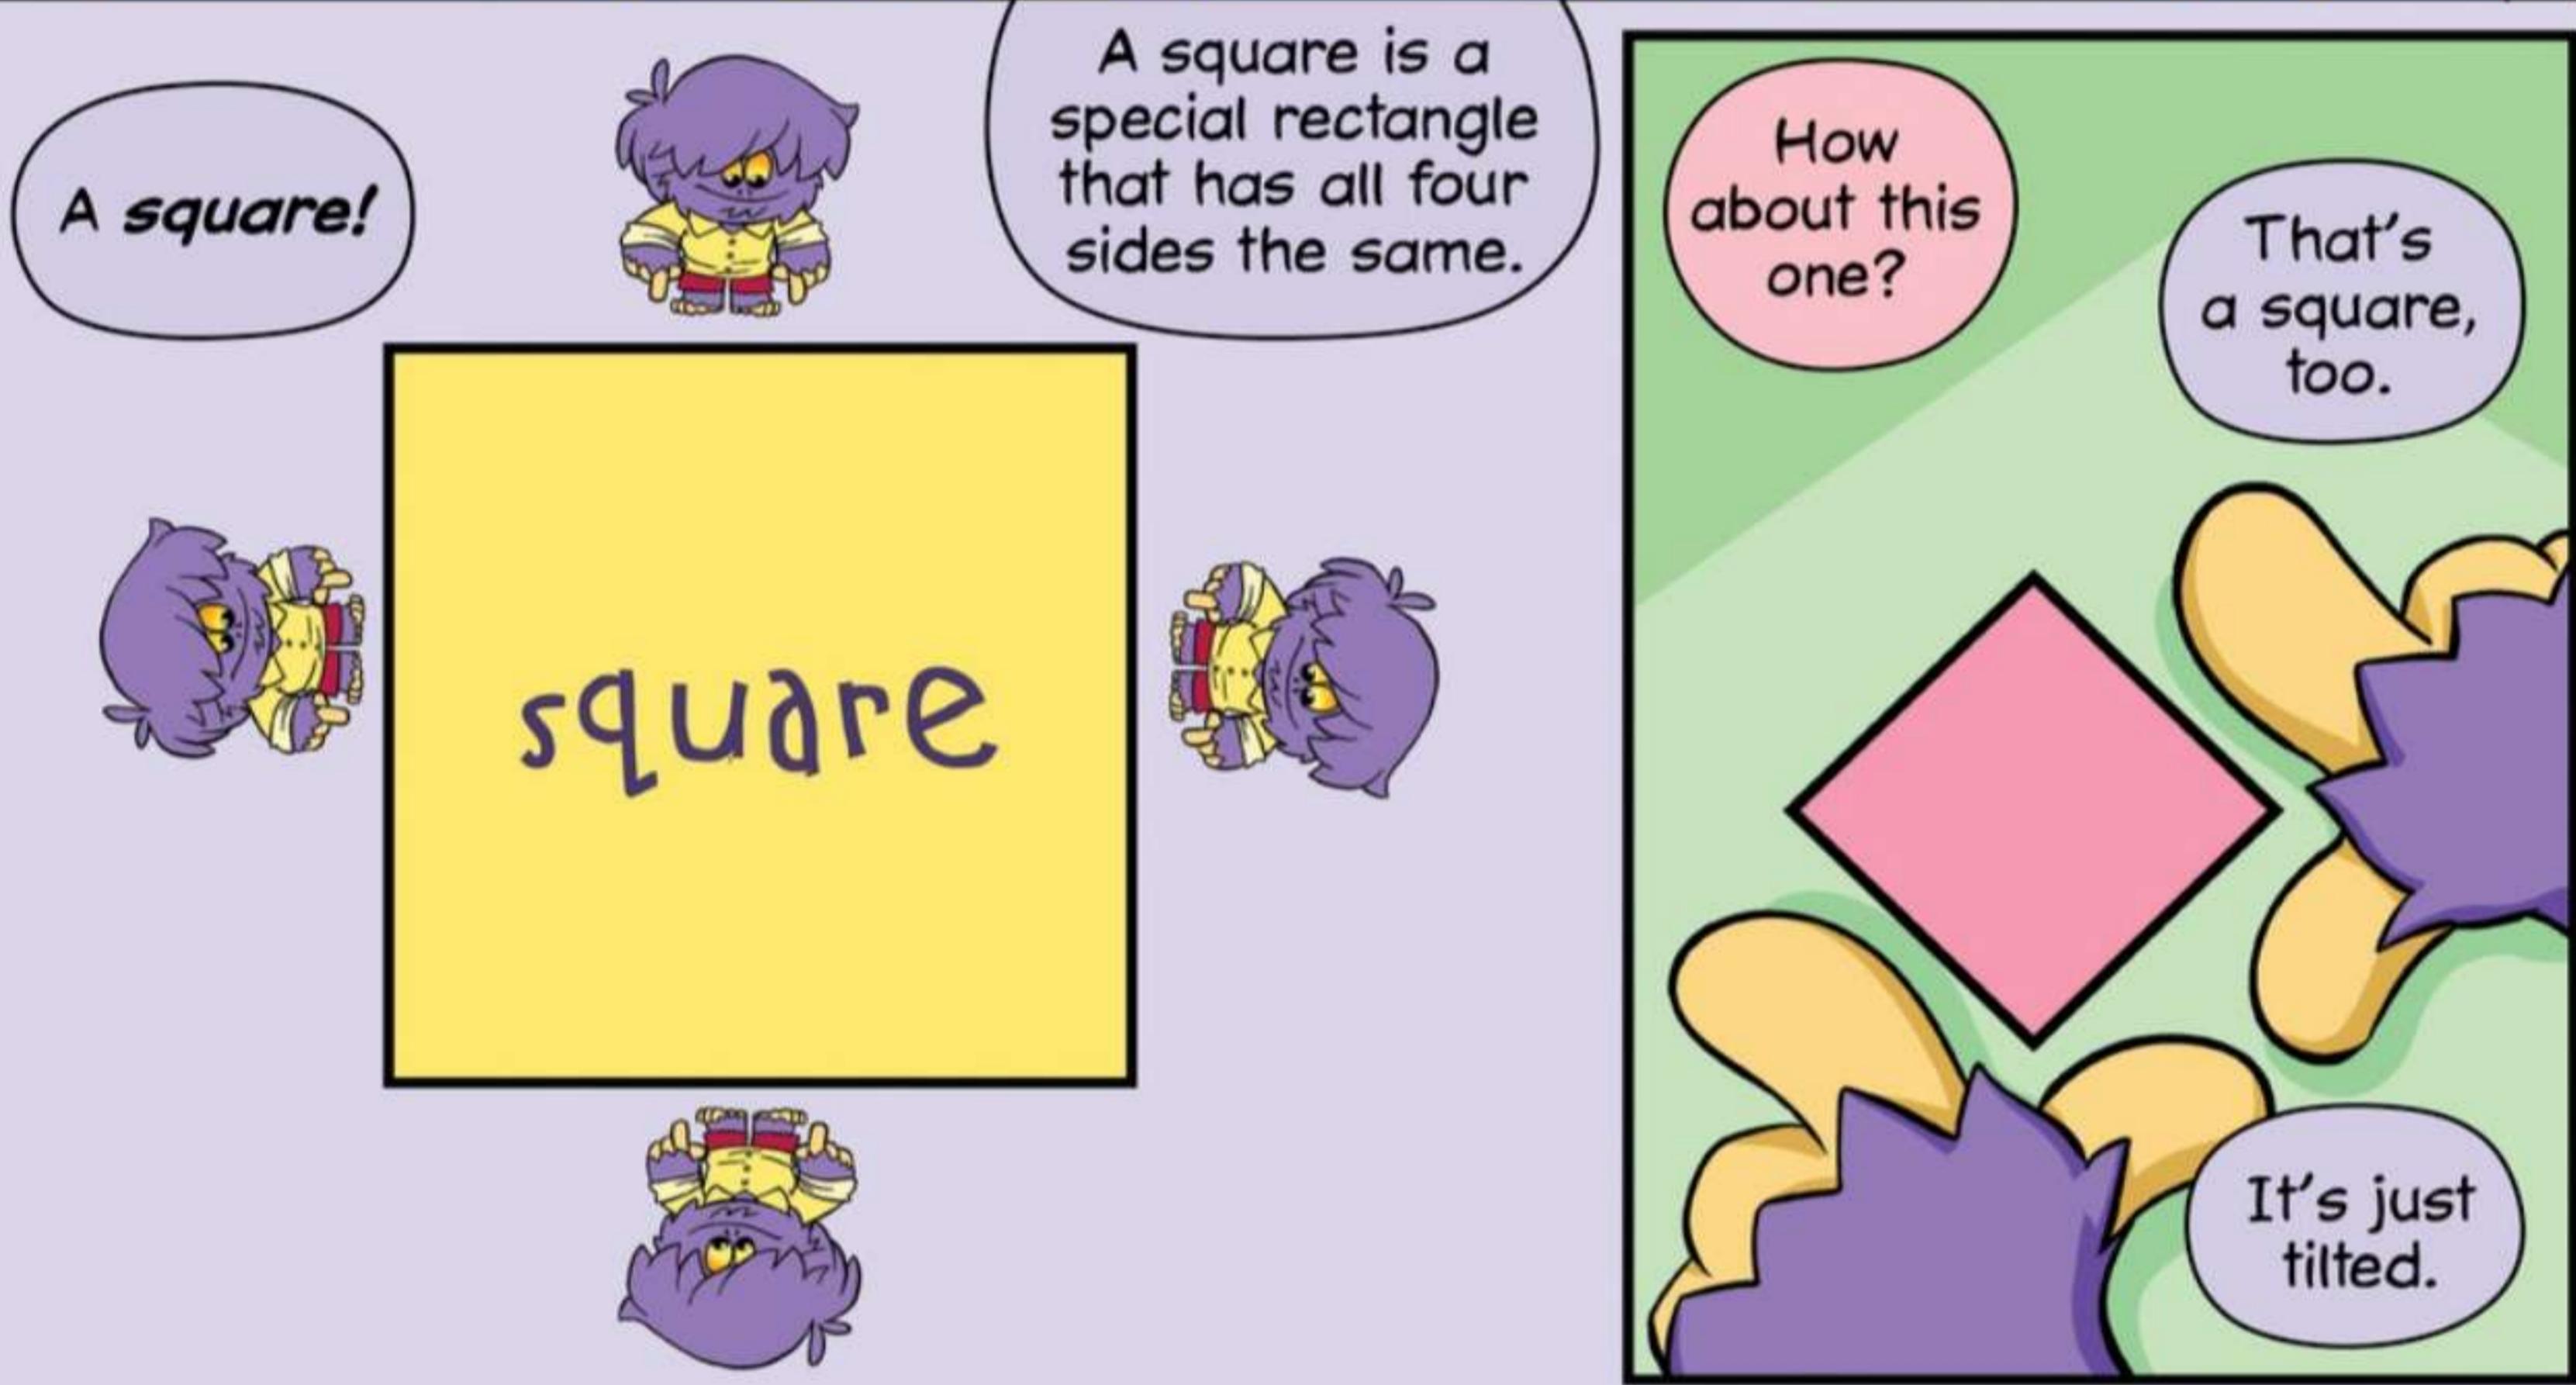

Kitchen Table NAMES

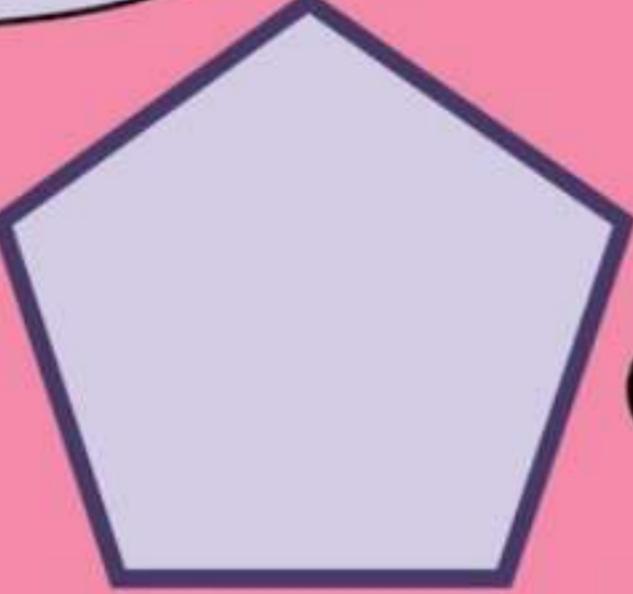

Shapes where all the sides and corners look the same are called *regular*.

And shapes with five sides are called *pentagons*.

So this one is a *regular pentagon*.

regular pentagon

There are names for shapes with more sides, too.

| sides: | name: |
|--------|----------|
| 5 | pentagon |
| 6 | hexagon |
| 7 | heptagon |
| 8 | Octagon |
| 9 | nOnagon |
| 10 | decagon |

YOU DON'T NEED TO REMEMBER ALL THESE NAMES.

This one is regular, so I'm going to give it a regular name like Norble.

And this one isn't regular. I'll give him a fun name.

Like Jon...

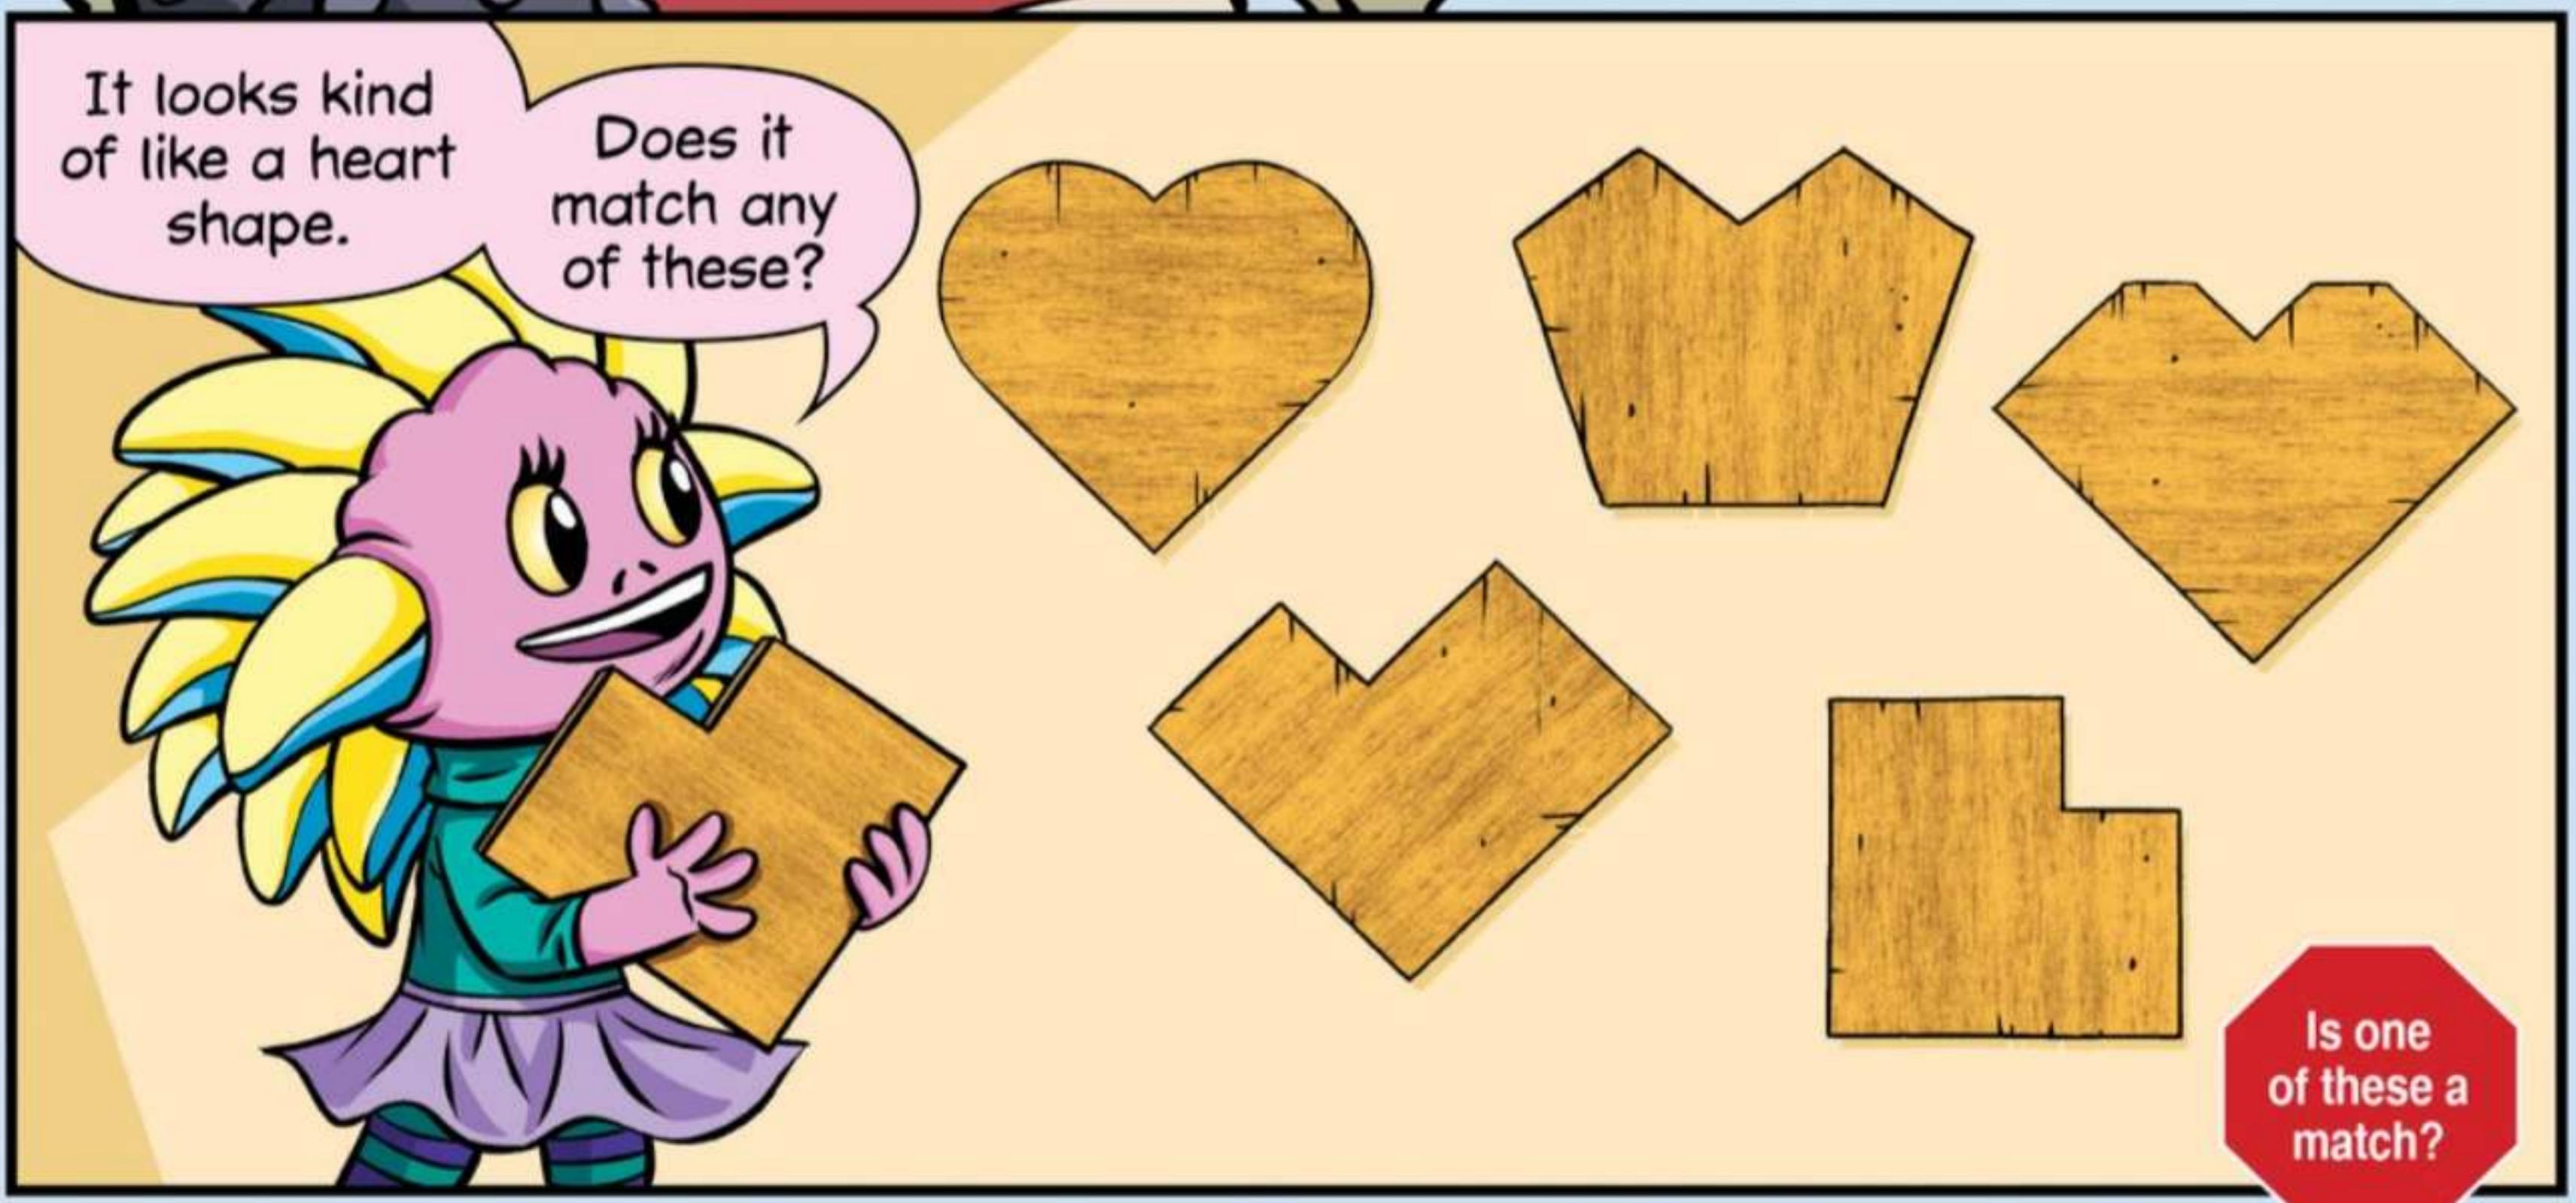

...but with an H!

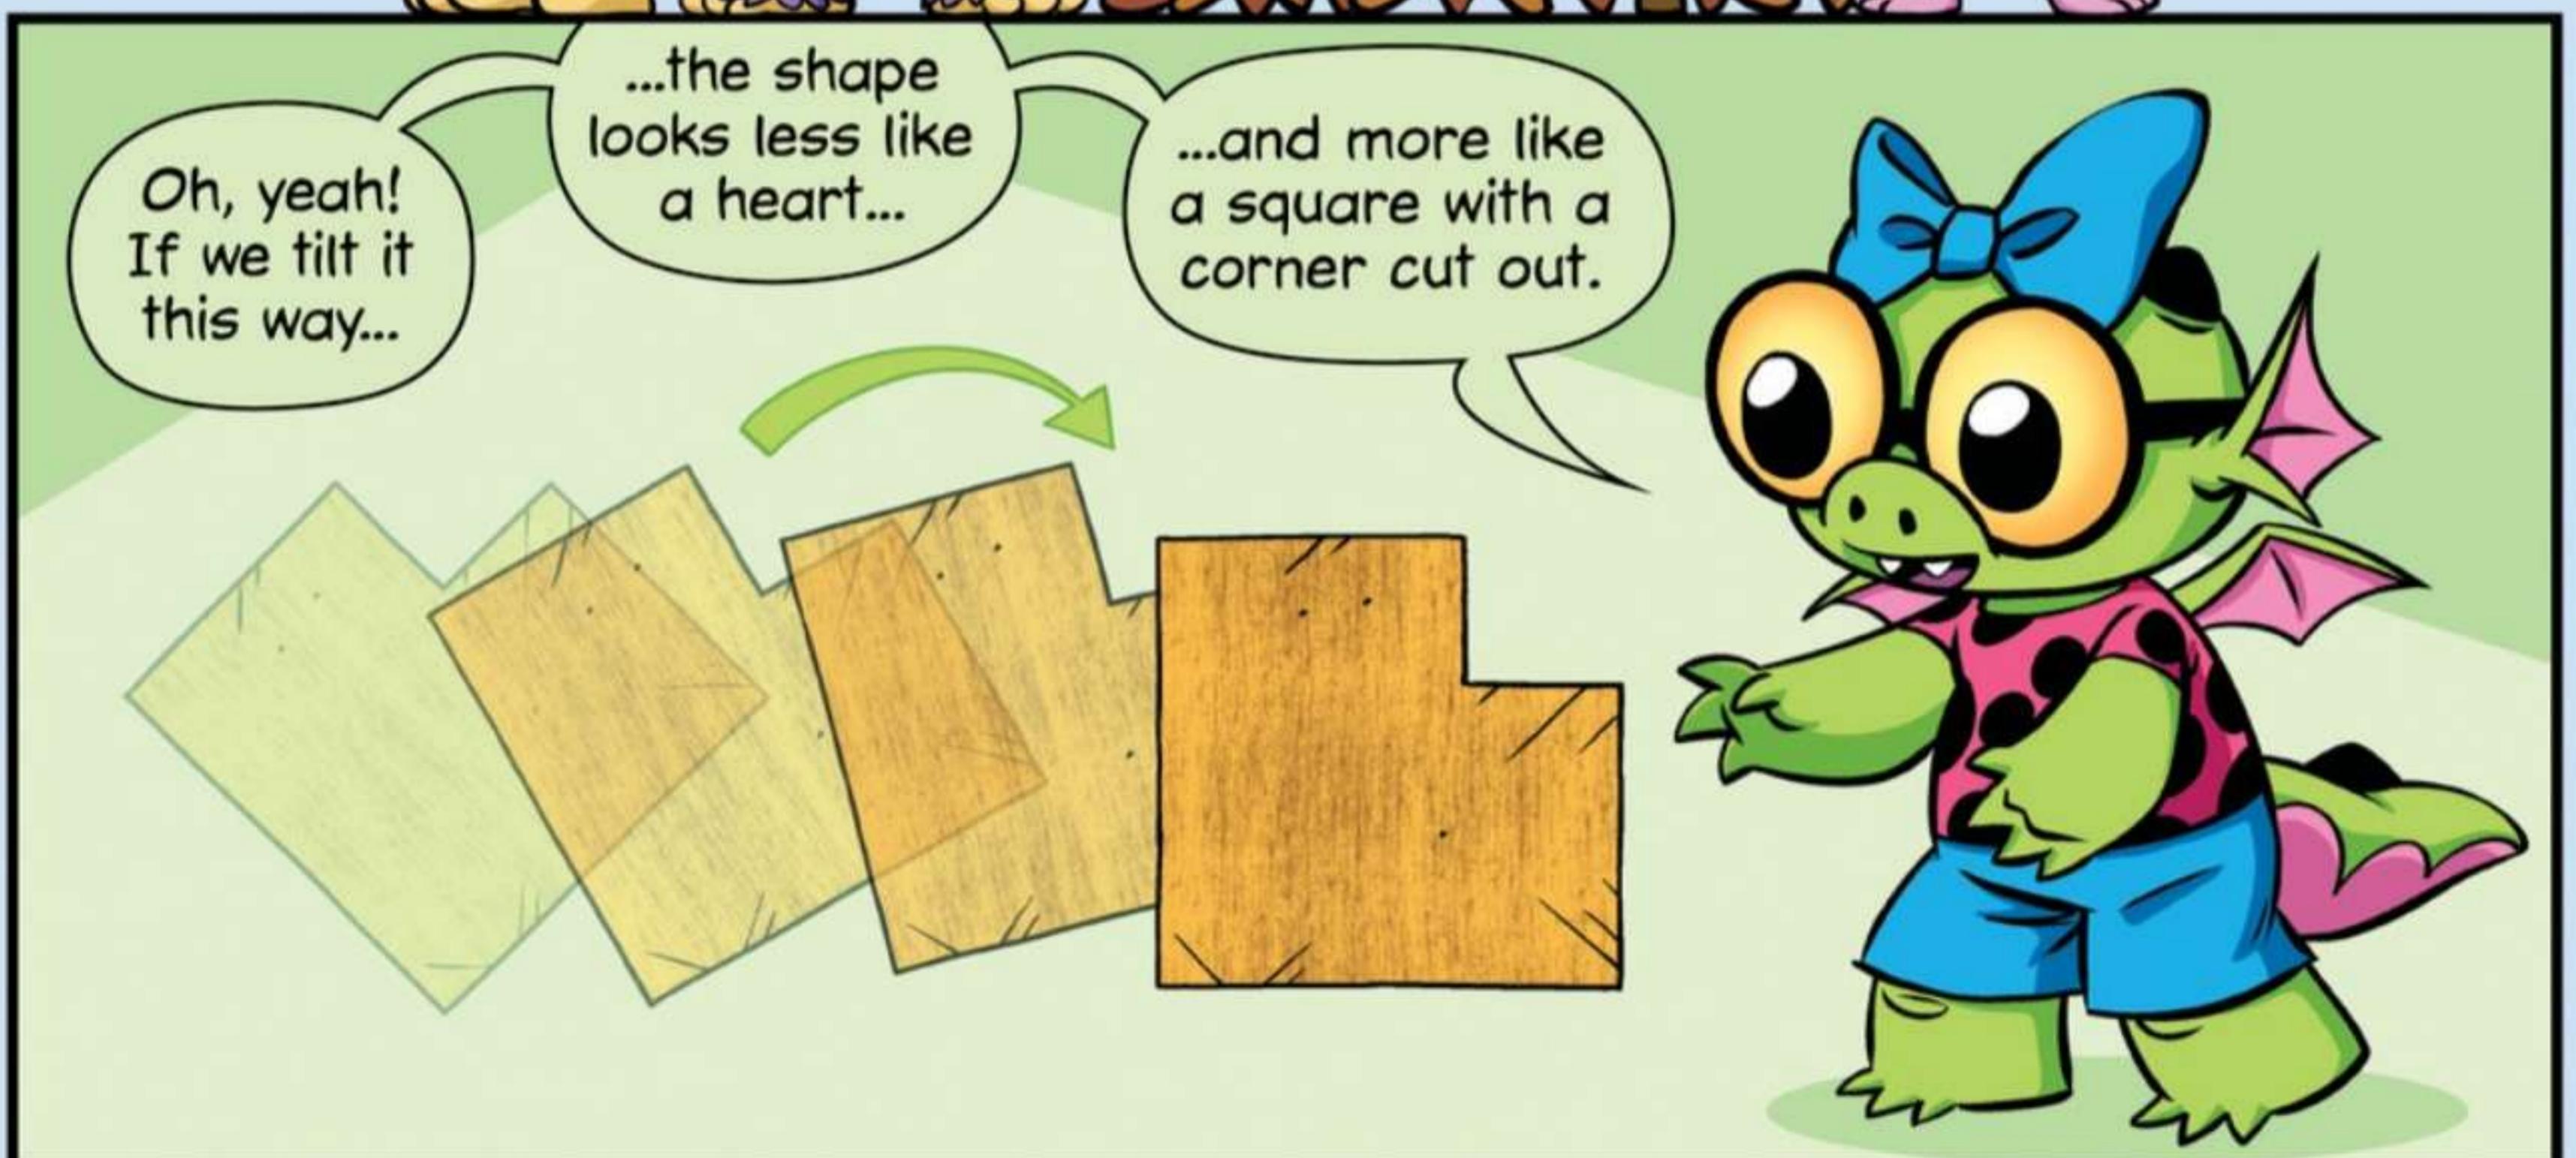

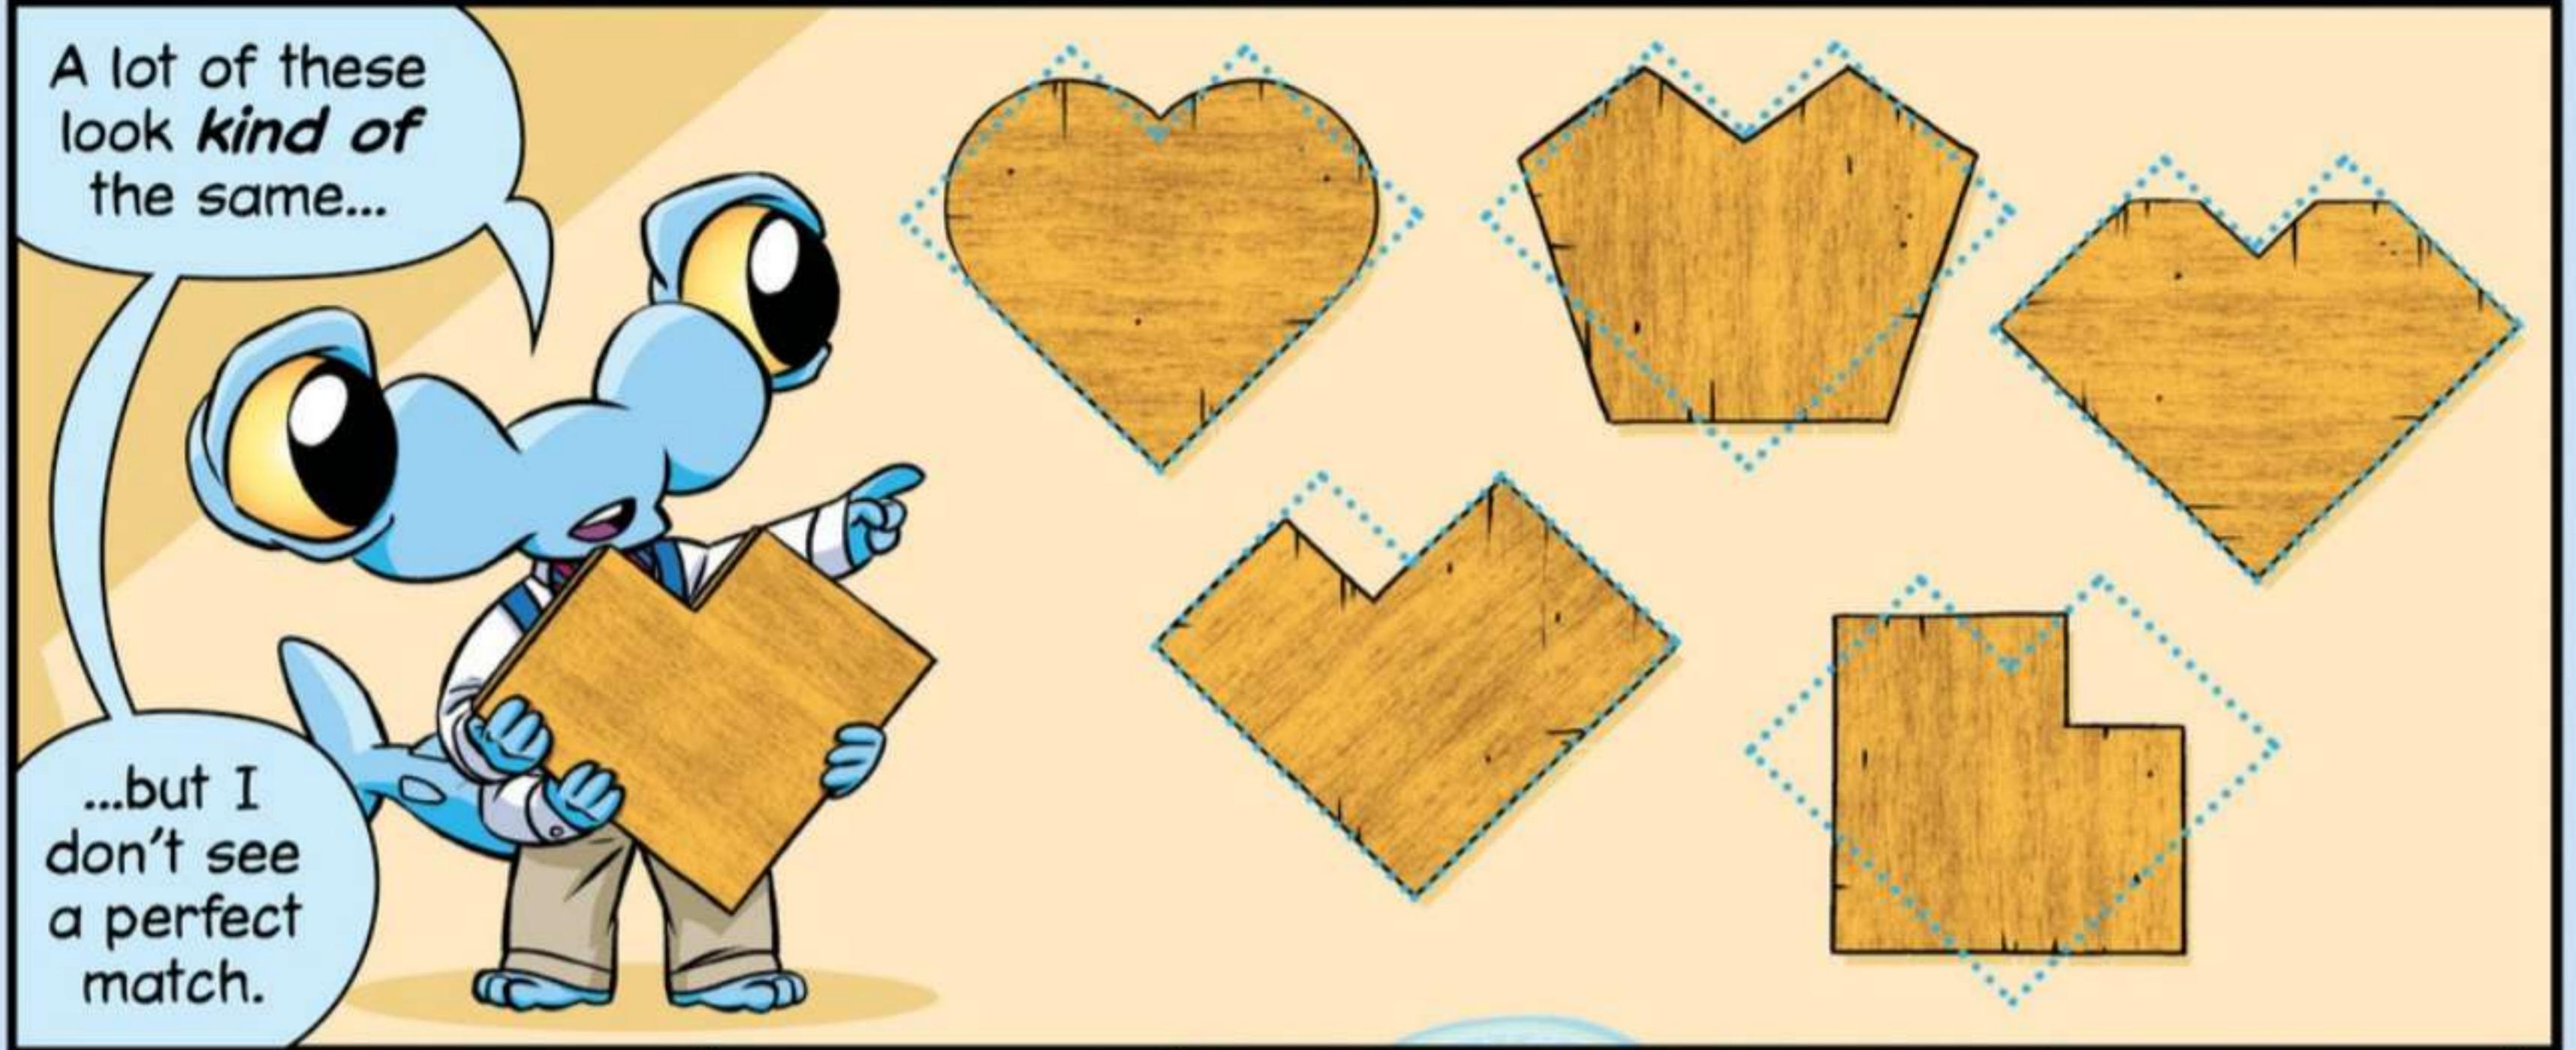

Cute!

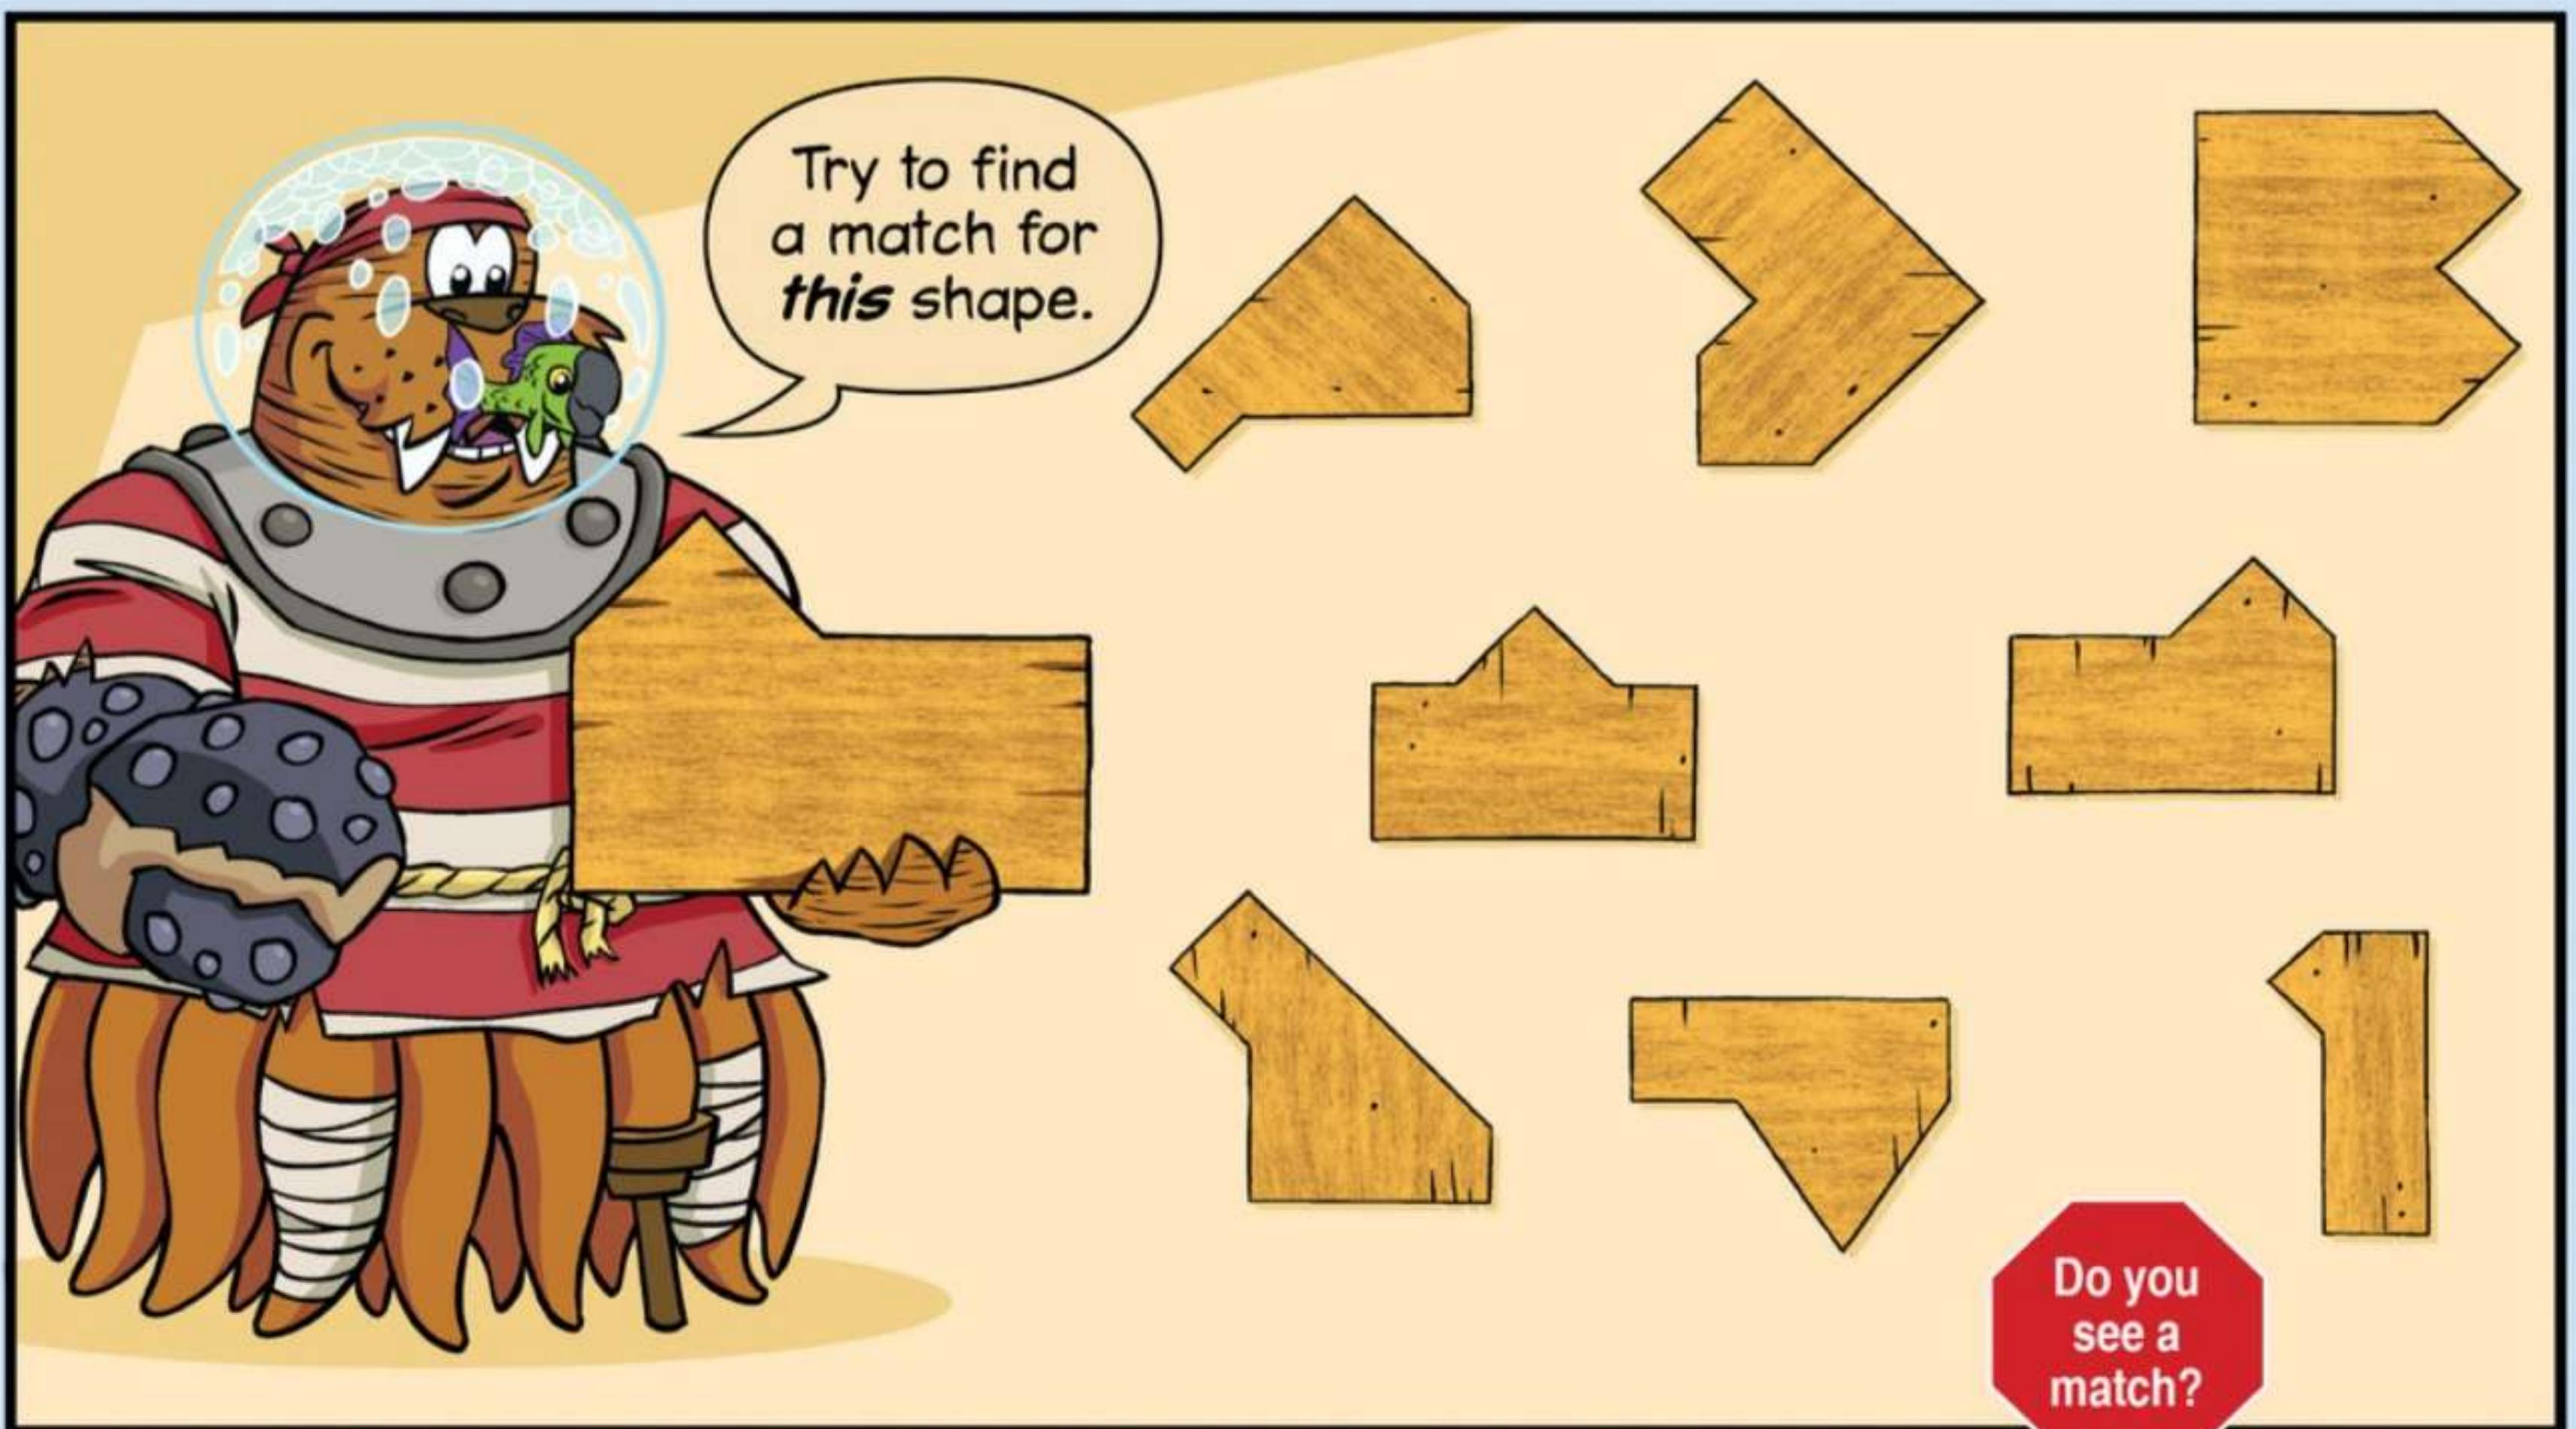

NOrble

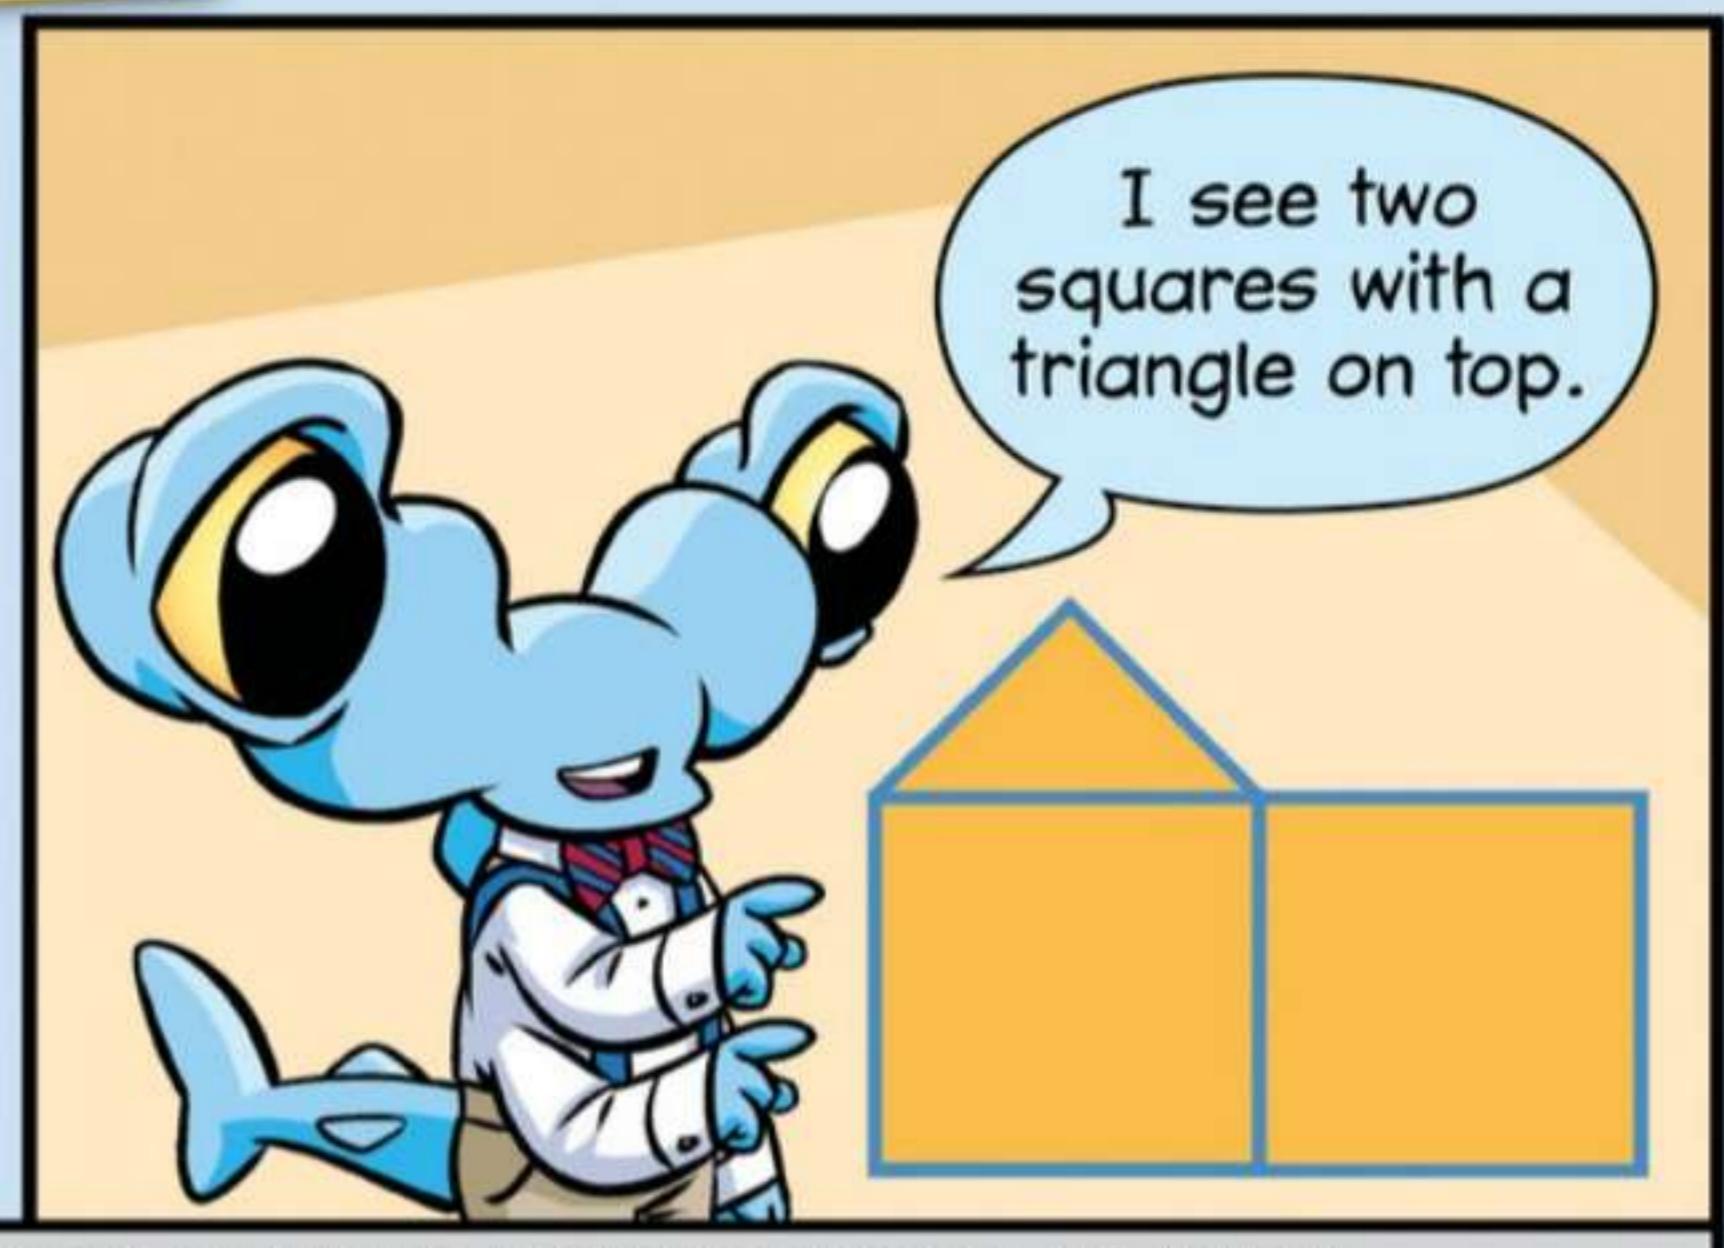

JOHn

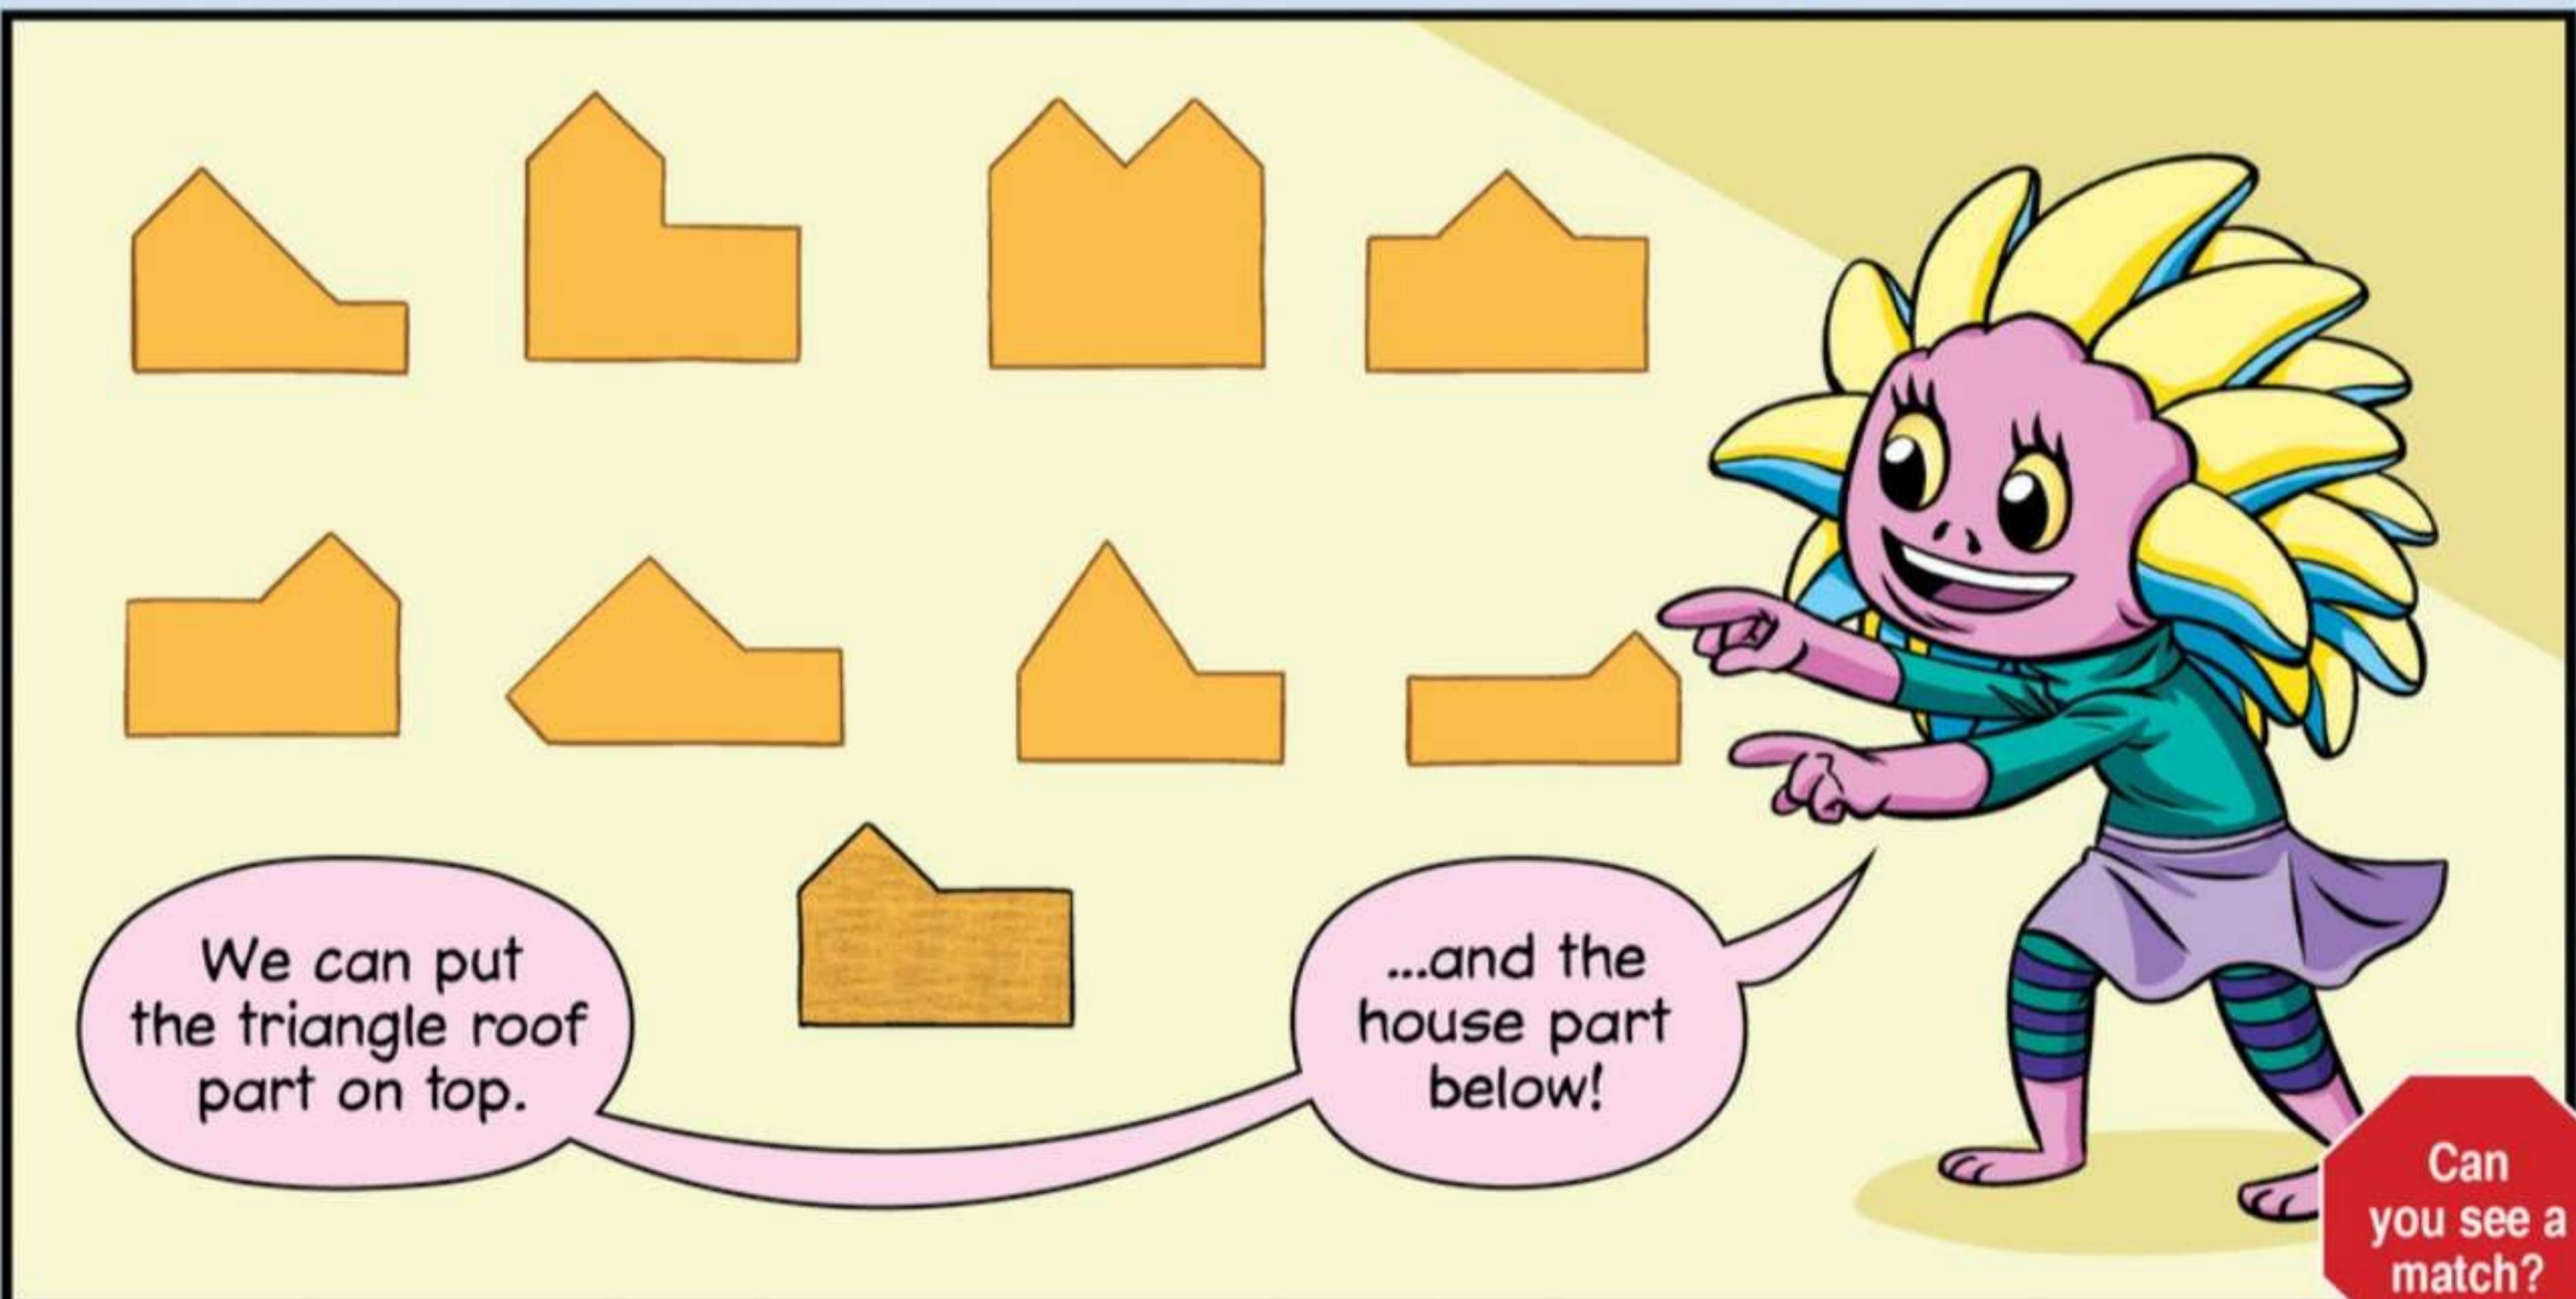

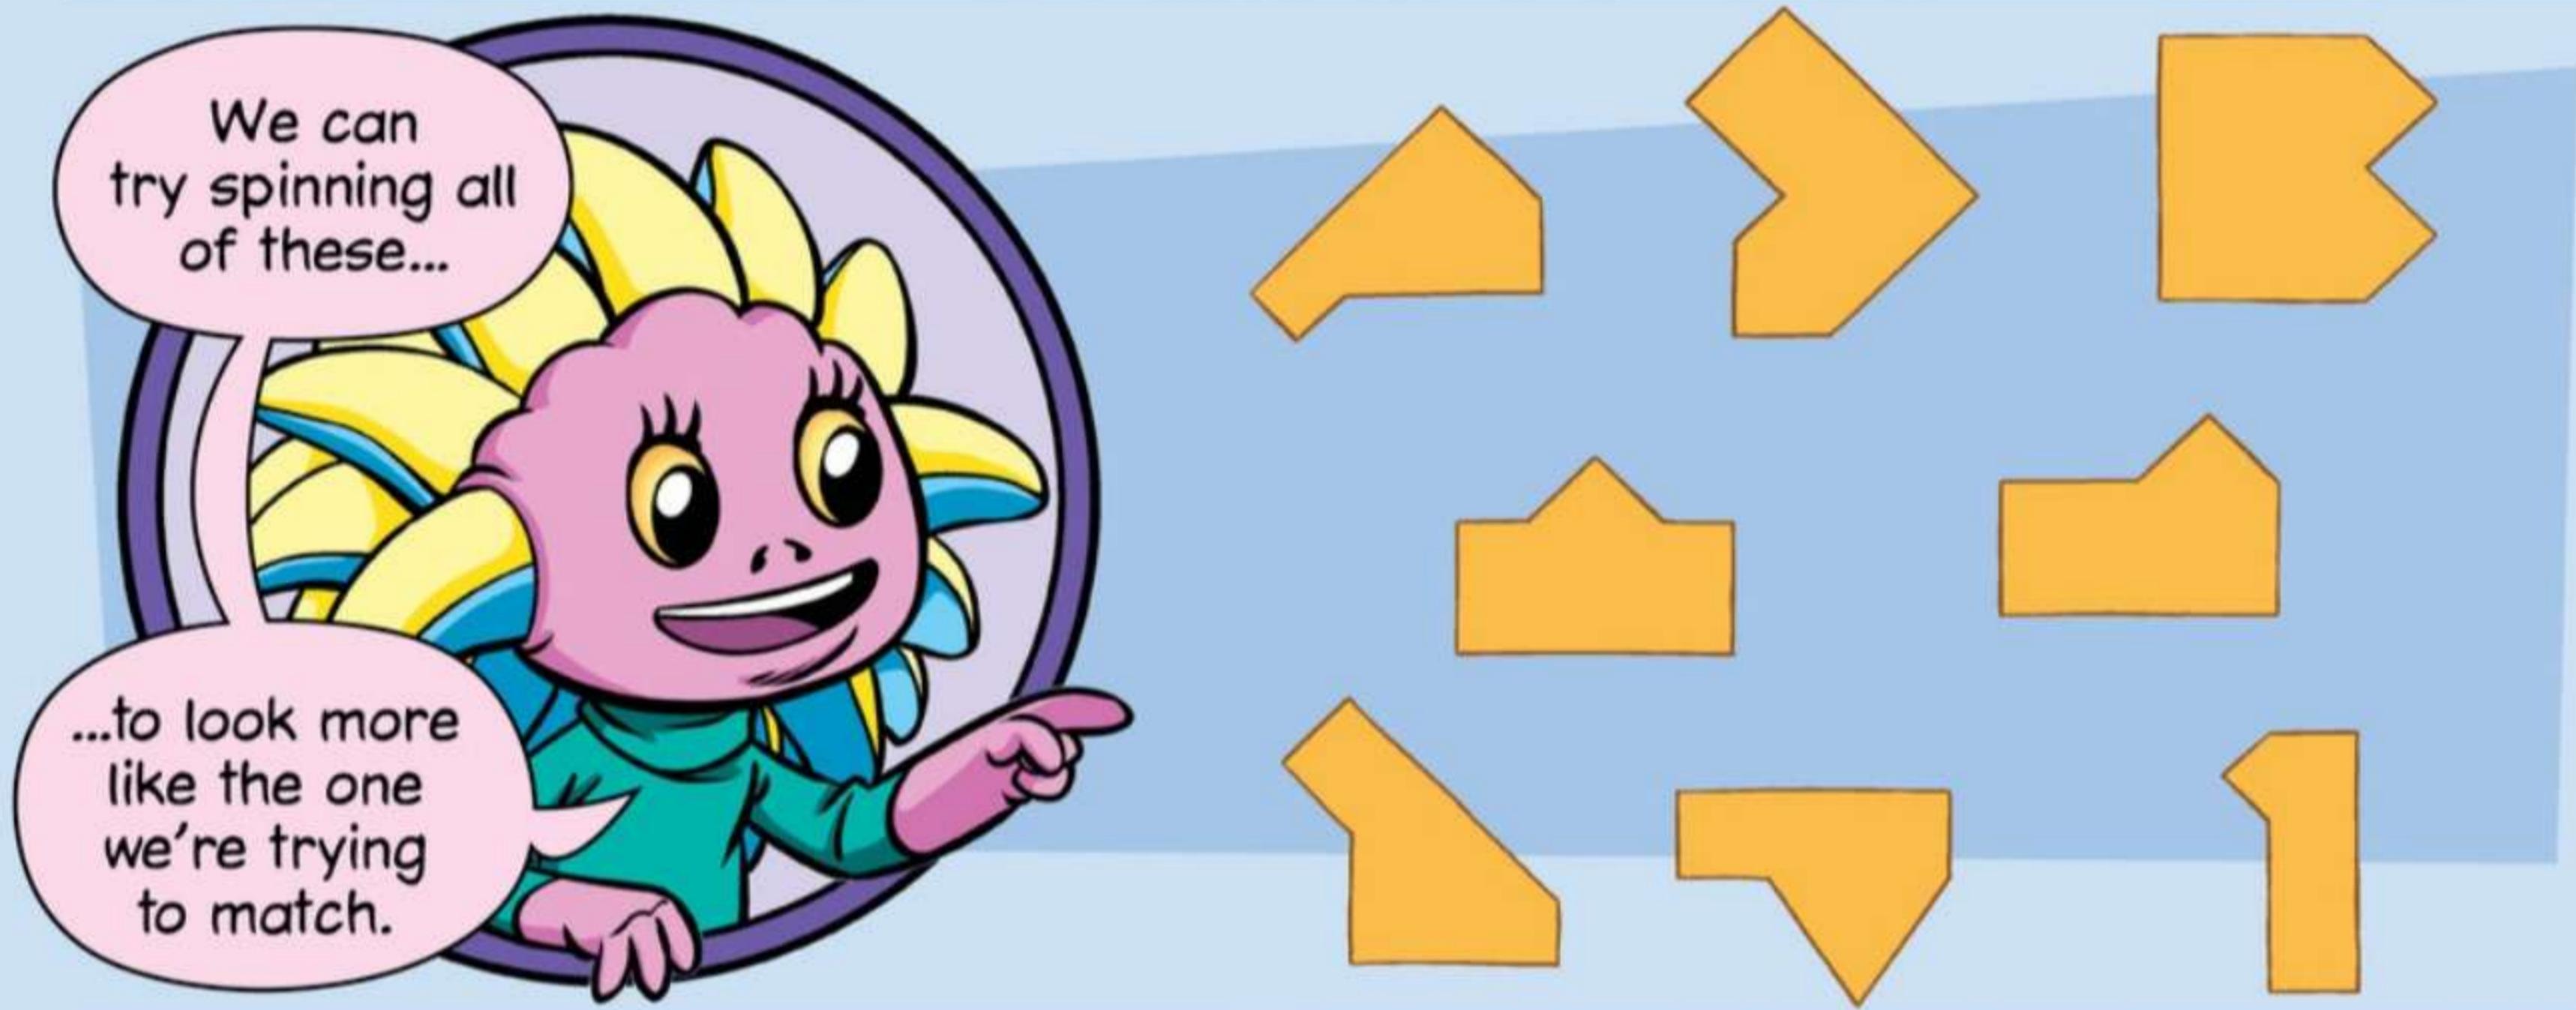

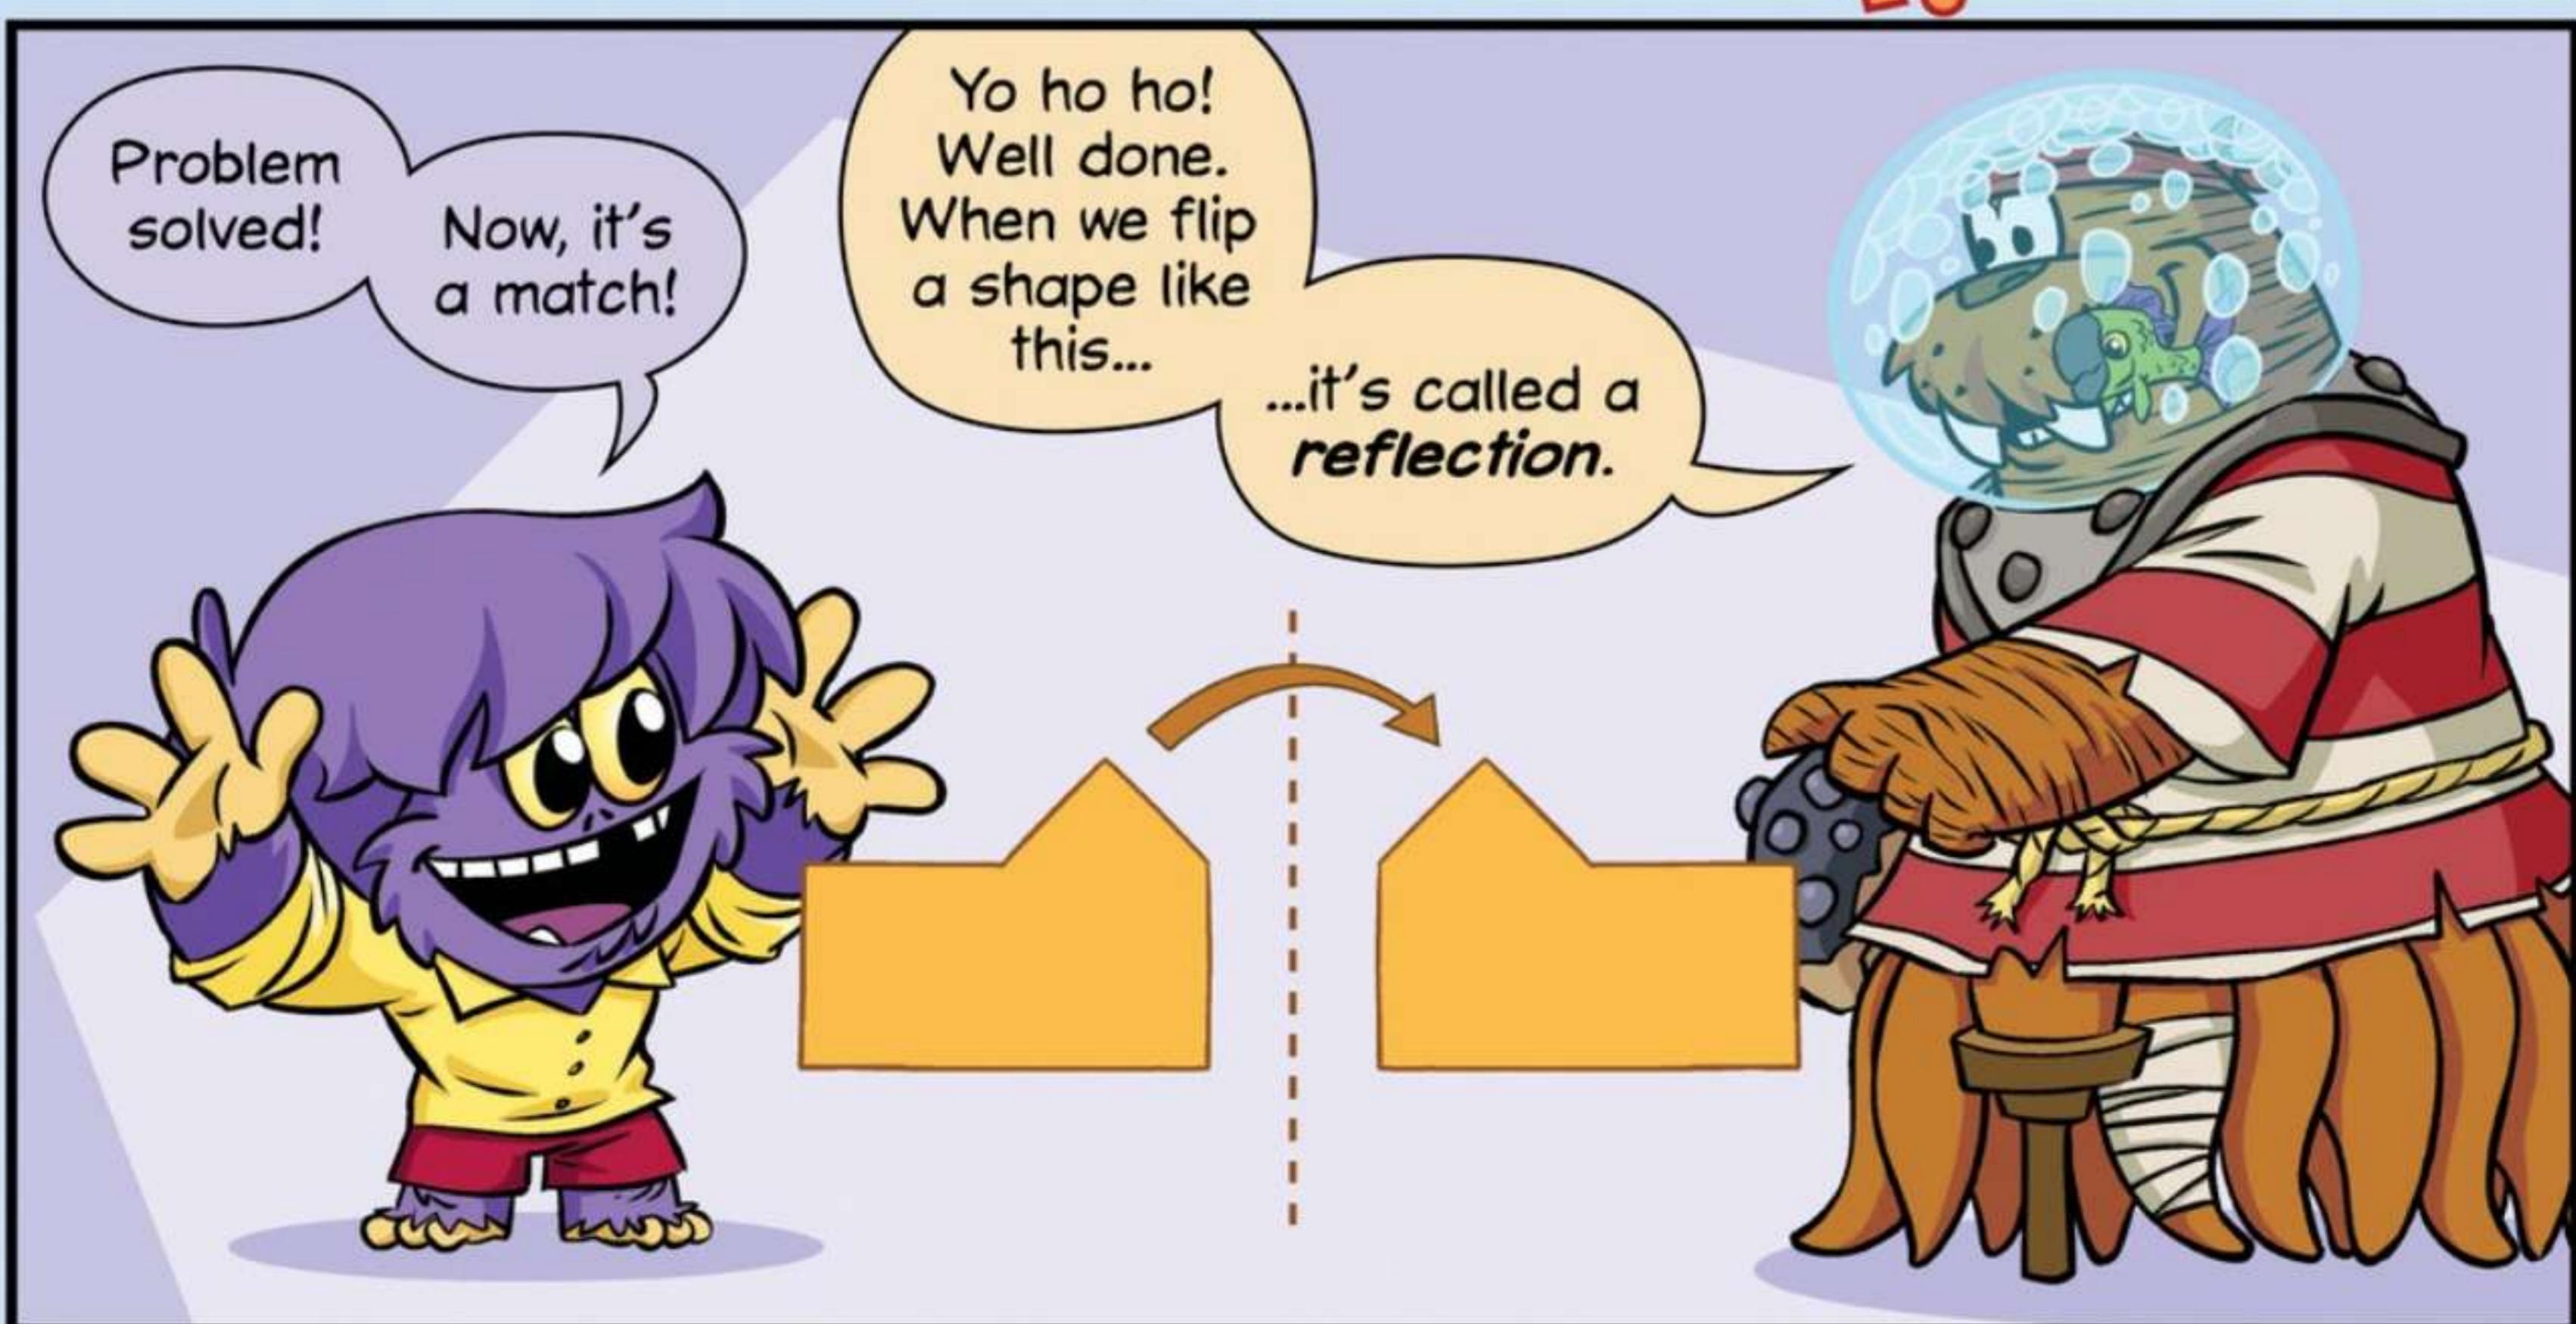

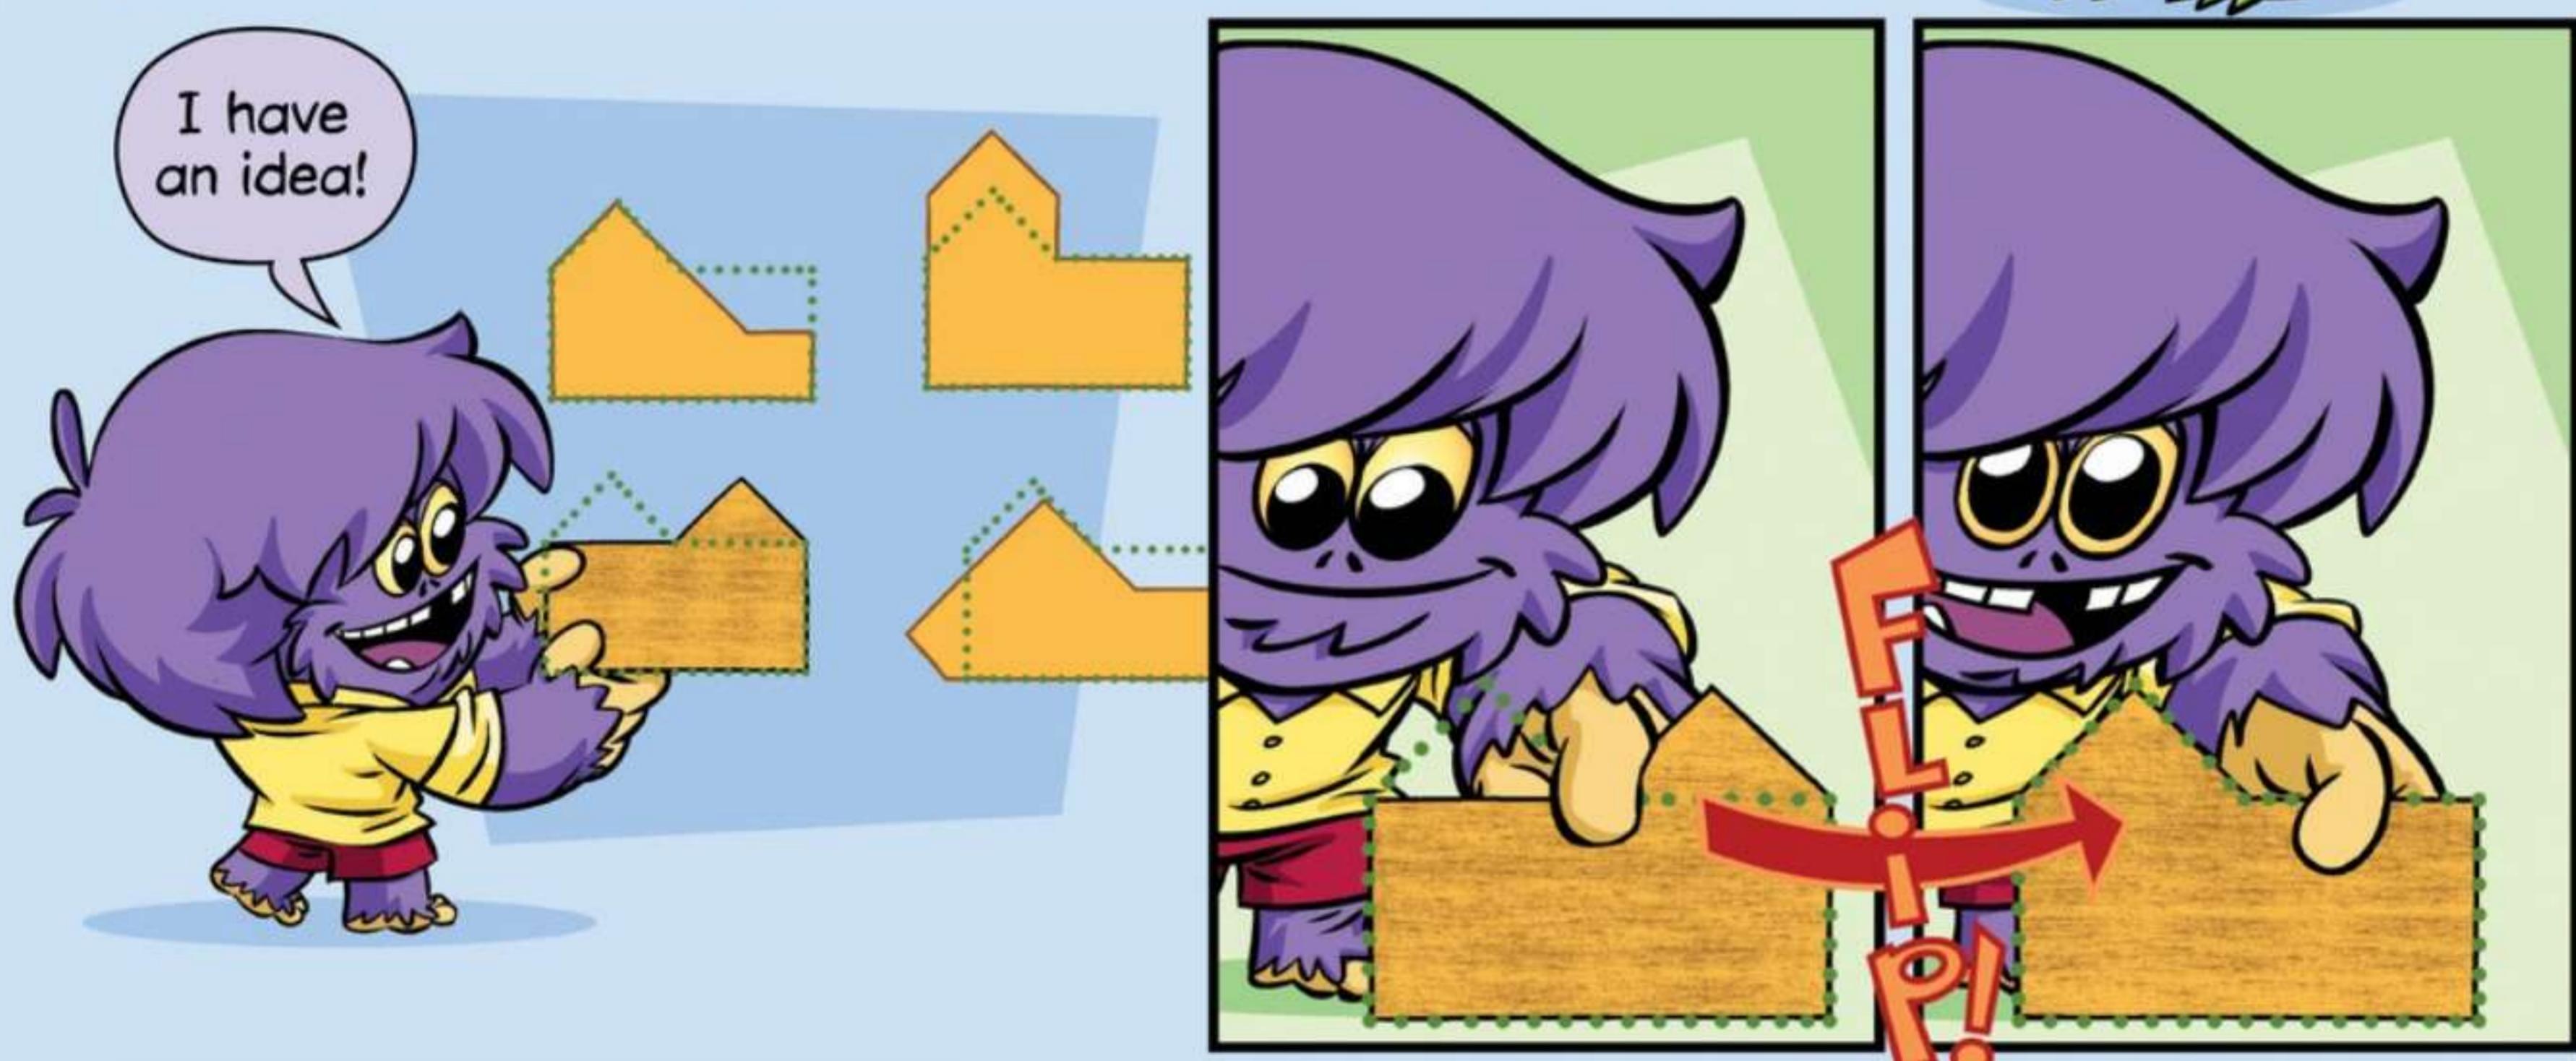

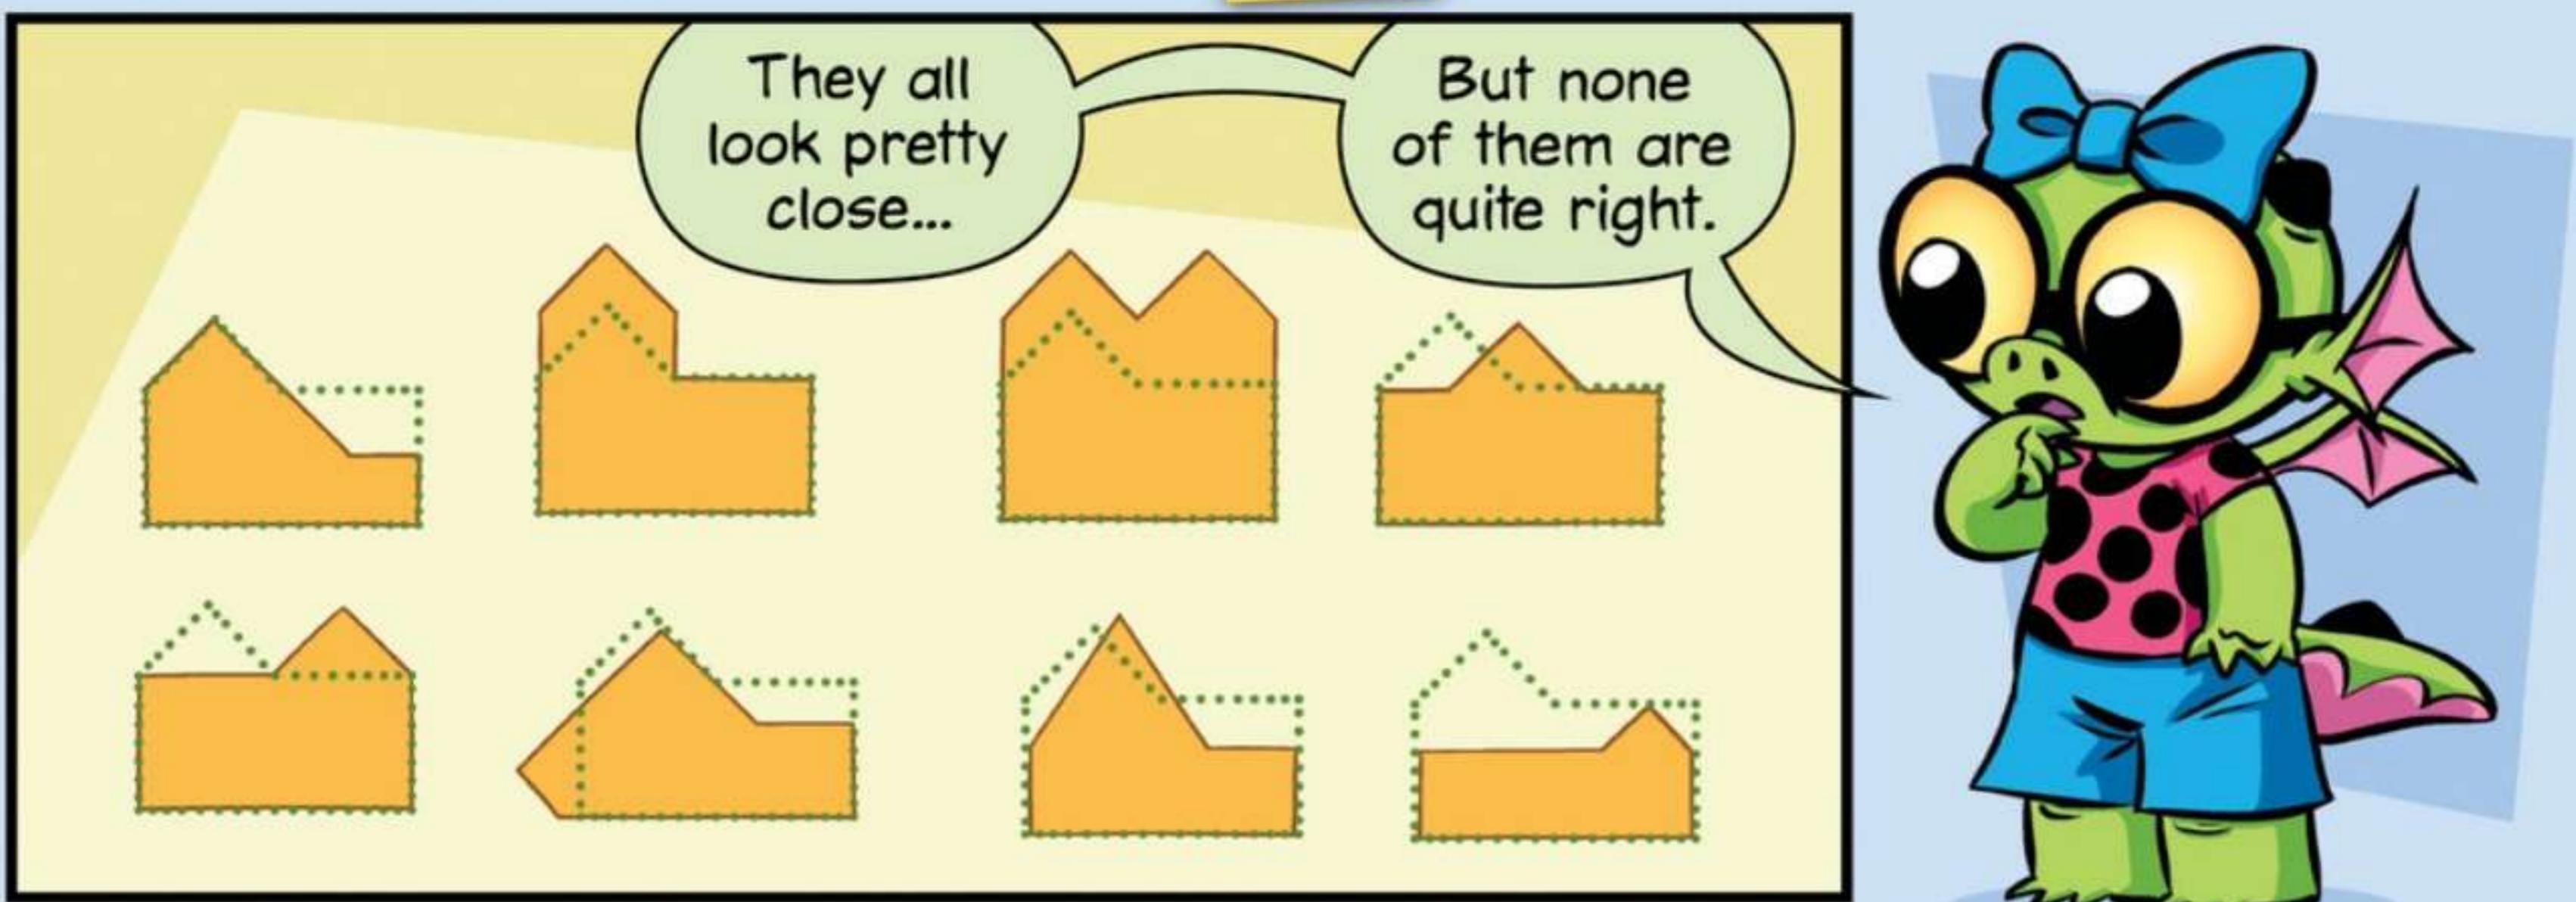

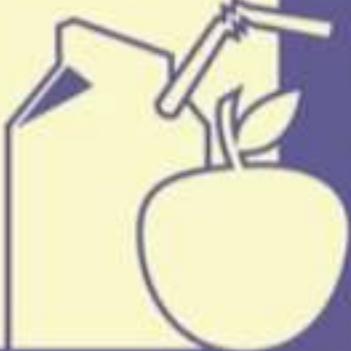

DESCRIBING A SHAPE OR SPLITTING IT INTO PARTS CAN MAKE IT EASIER TO SEE ITS MATCH.
